

TULE final seminar 29.10.2025

Towards future age-friendly living

**Future Senior Housing (TULE) -project
Knowledge Center For Real Estate Development (KCRED)
Faculty of Built Environment (BEN)
Tampere University**

Project manager: Jaana Vanhatalo

Project leader: Jukka Puhto

Researchers: Veronika Haukeland + Juha-Matti Junnonen

Communications: CoreLab (Alisa Hakola & Jaakko Kinnunen)

Program

15.30 Welcome!

15.35 Briefly about the TULE project

**15.45 TULE-model: Towards future age-friendly living with
sustainable principles**

17.15 Discussion

Ending at latest at 17.30

Briefly about the TULE project

Background for the project

- Challenges of demographic change
- Need for intermediate form of housing
 - In project independent housing is included
- + Social Welfare reform in action in 2023
 - Wellbeing services counties
 - Communal housing
- + Changes in state-subsidized housing production

Statistics Finland 2022

Future Senior Housing (TULE) -project

- Development, co-creation and research project
- 3/2023-10/2025
- Funded by Centre for State-Subsidised Housing Construction (Varke, former ARA) and 22 other organisations (housing providers, builders, municipalities) + expert member from Ministry of the Environment → Steering group & participants
 - Work supported by an internal specialist group from the TAU / BEN (Research groups of Sustainable Housing Design (ASUTUT), Urban planning and Construction management and economics)

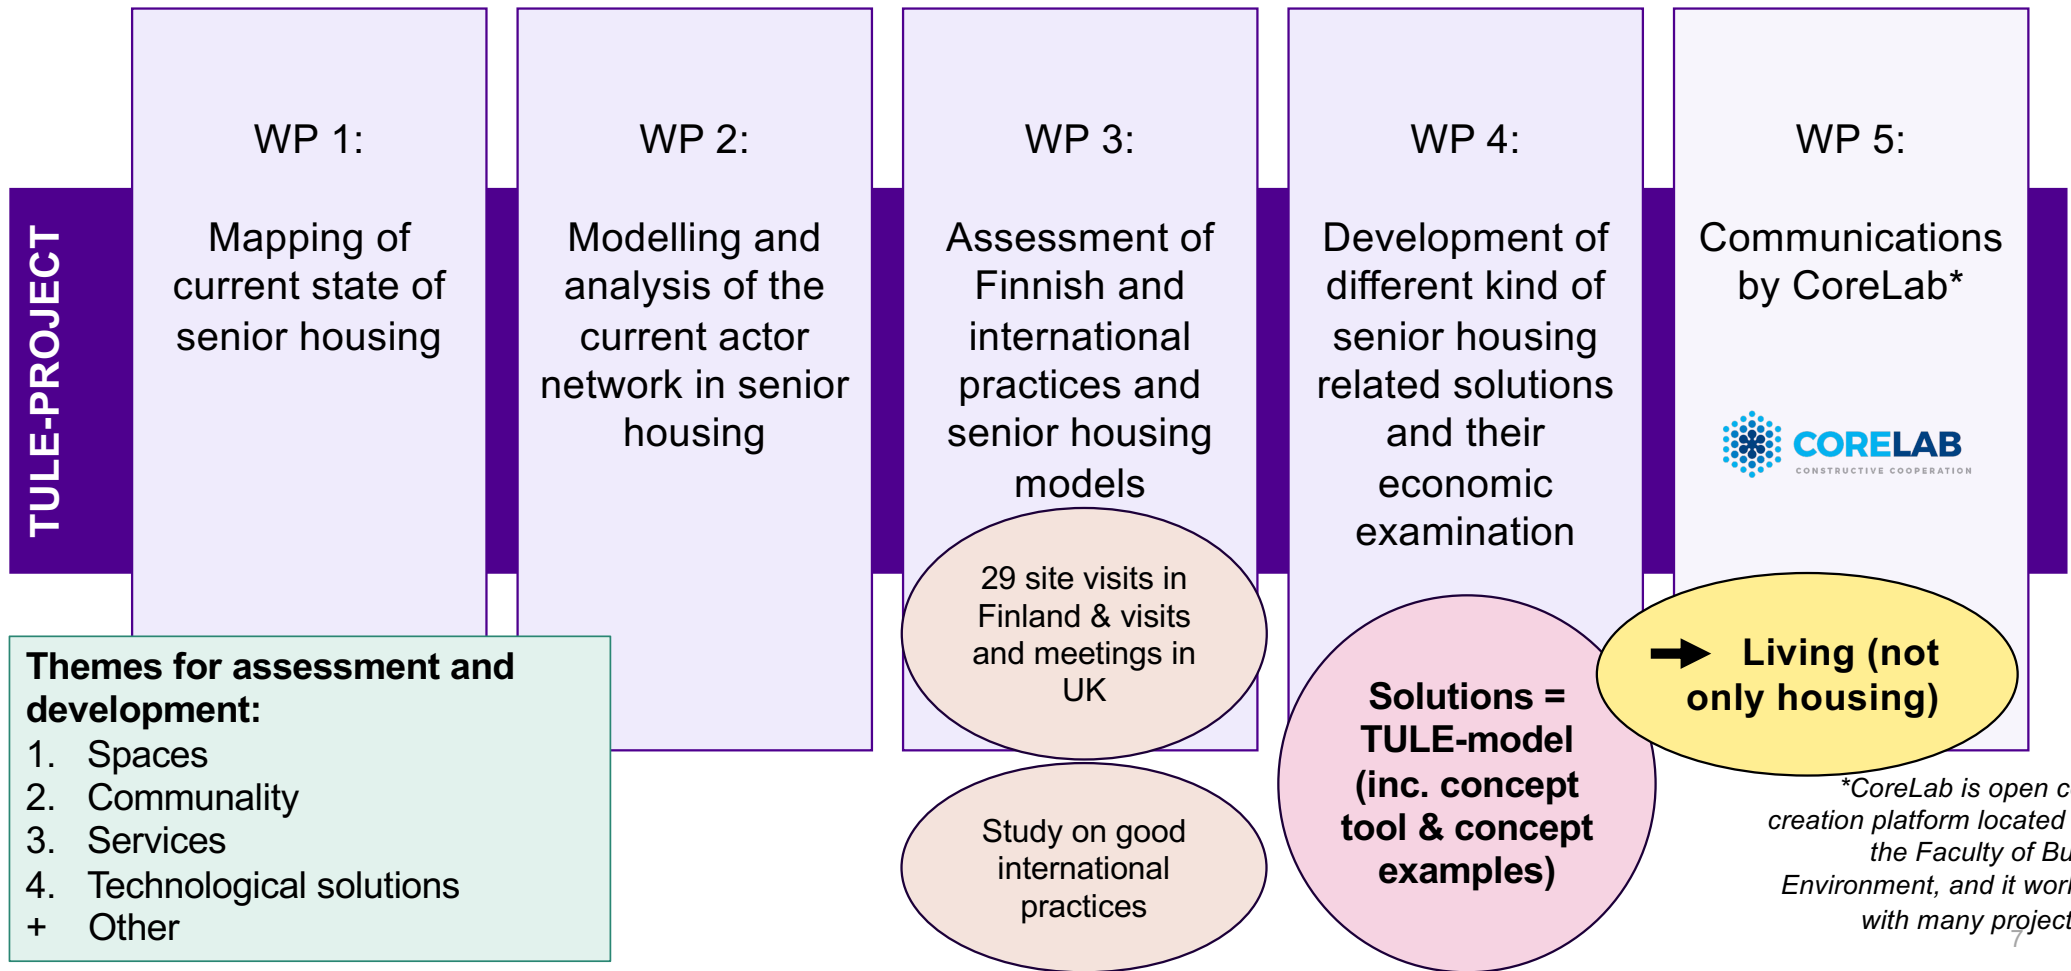

Aim:

To develop novel housing concepts for
future senior housing

**As a result a broader model for
developing and designing age-friendly
living**

Workpackages of TULE project

TULE events:

- For steering group 8 workshops/meetings
 - With the workshops site visits to interesting schemes on housing and services
 - In meetings lectures, talks, discussions and workshopping related to different themes of senior housing
- Excursions abroad
 - London, UK 5/2024
 - Tallinn, Estonia 5/2025
- Webinars
 - On Welfare County reform 3/24 (in Finnish)
 - On international research and good practices 10/24 (in English)
 - Relocatable buildings as a potential for the future? 5/25 (in Finnish)
- Final seminars in Tampere (&Teams) Oct 9th and 29th

Assessment of Finnish schemes

- Through site visits (19 sites assessed)
- On site visit our participants filled site assessment form
 - these findings are summarized and analysed → Guidelines what to consider and what to avoid when designing/planning age-friendly living

  TULE – Tulevaisuus

Nimi: _____

Kohde: _____

Täytä lomake soveltuvin osin. Voit kiinnittää erityishuomiota ammattitaitosi kannalta o

T - TILAT

Onko kohteessa erityisiä hyviä ratkaisuja tai erityisiä haasteita tiloihin liittyen? Men asunto, käytävät, yhteiset tilat että piha-alueet.

Kiinnitä huomiota esimerkiksi tilojen toimivuuteen ja viihtyvyyteen sekä turvallisuut muunneltavuus, yhteys luontoon, esteettömyys, päivänvalon riittävyys, turvalliset m esteettisyys.

Y - YHTEISÖLLISYYS

Onko kohteessa tilallisesti tuettu yhteisöllisyyttä? Ovatko tilat avoimessa käytössä? yhteisöllisyyttä?

P - PALVELUT

Onko kohteessa erityisiä / innovatiivisia ratkaisuja tai käytänteitä palveluihin liitty palvelujen järjestäminen jne.)?

TR - TEKNOLOGISET RATKAISUT

Onko kohteessa hyödynnetty erityisiä / innovatiivisia teknologisia ratkaisuja?

M - MUUT HUOMIOT

Study on good international practices

Which could give new aspects to Finnish senior housing

Spaces

- Hogeweyk, Netherlands
- SMILE Homes®, UK
- Rochestown House, Ireland

Communality

- New Ground Cohousing, UK
- SällBo, Sweden
- Tonic@Bankhouse, UK
- Regnbågen, Sweden

+ Financing / Implementation models

- Social Impact Bond, SIB
- Section 106 (S106) & Community Infrastructure Levy (CIL), UK

Services

- Bauernhof Wohngemeinschaft, Germany
- Middleton Hall, UK
- An Cluinín Retirement Village, Ireland
- Nippon Active Life Club, Japan

Technological solutions

- Circadian lighting in nursing homes, Denmark
- Intelligent Lilli, UK
- Green Man +, Singapore
- Age-friendly taxi ordering service, China
- Colette, France

Good international practices: visits abroad

Excursion to London 5/24:

- Tonic @Bankhouse
- Hazelhurst Court
- Appleby Blue Almshouse
- Noele Gordon House
- Auriens Chelsea
- A House for Artist
- Clarion Housing
- Container City
- Design Museum

Excursion to Tallinn 5/25:

- 3 module building companies
- Seminar with City of Tallinn
- 1st senior house of City of Tallinn (Maleva tn 18)
- Tabasalu Pihlakodu
- Scandium Living, Magma Studios

+ Vanhatalo's trip to Manchester & Leeds 11/24:

- Gorton Mill House (Southway)
- Abbey Hey / Ageing in place program
- MUCH - Manchester Urban Cohousing Limited (senior co-housing)
- Manchester universities
- Salford Foyer (Places for People)
- Manor Gardens, Bolton (Places for People)
- Smithy Croft, Heald Green, Stockport (Your Housing Group)
- Community Savers

+ 2x EFL autumn conference

TULE-model: Towards future age-friendly living with sustainable principles

Jaana Vanhatalo & Veronika Haukeland

Background, structure and guiding principles of TULE-model

Process for developing the model

- Materials for the development work:
 - Research conducted during the project
 - Workshops in the project
 - Discussions during project meetings
 - Domestic site visits
 - International trips
 - Expert knowledge
- Aimed to address challenges identified during the project
- From pure concepts to a broader TULE model

What is new in the model?

- The model aims to provide an overall view of the entire process of developing, planning and designing age-friendly living, including its phases and stakeholder roles.
- Bringing age-friendly approach to housing development and design.
- In the model, for the start of the process, we introduce a regional discussion forum, regional development phase, and a formation of a regional vision.
- Concept tool as part of the real estate development phase.
- Collecting information related to age-friendliness from various sources and synthesizing it.

Parts of TULE model

Guiding principles
(7pcs.)

**Process all the way from
regional development to use
and monitoring with
recommendations**

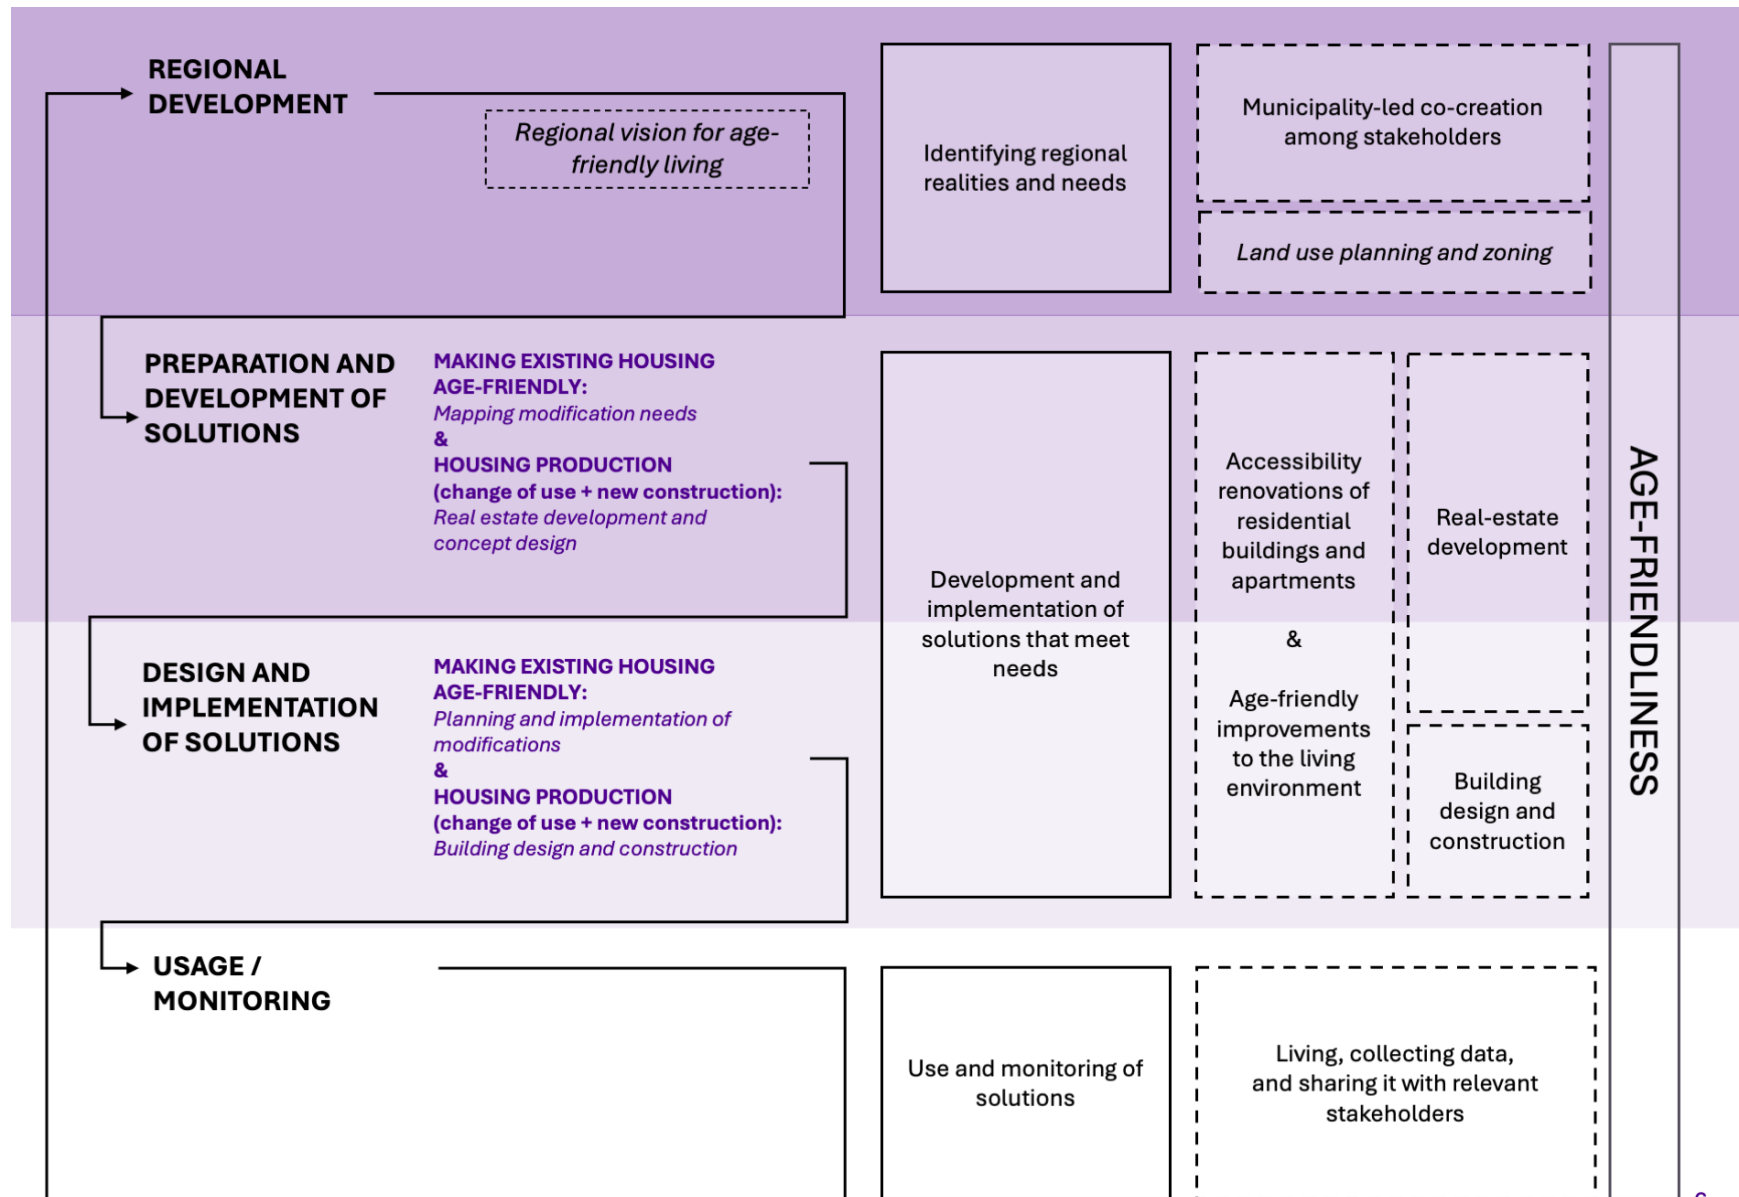

**Key parts for each actors and
their roles in different phases**

**Concept tool to support
concept development**
(in development phase)

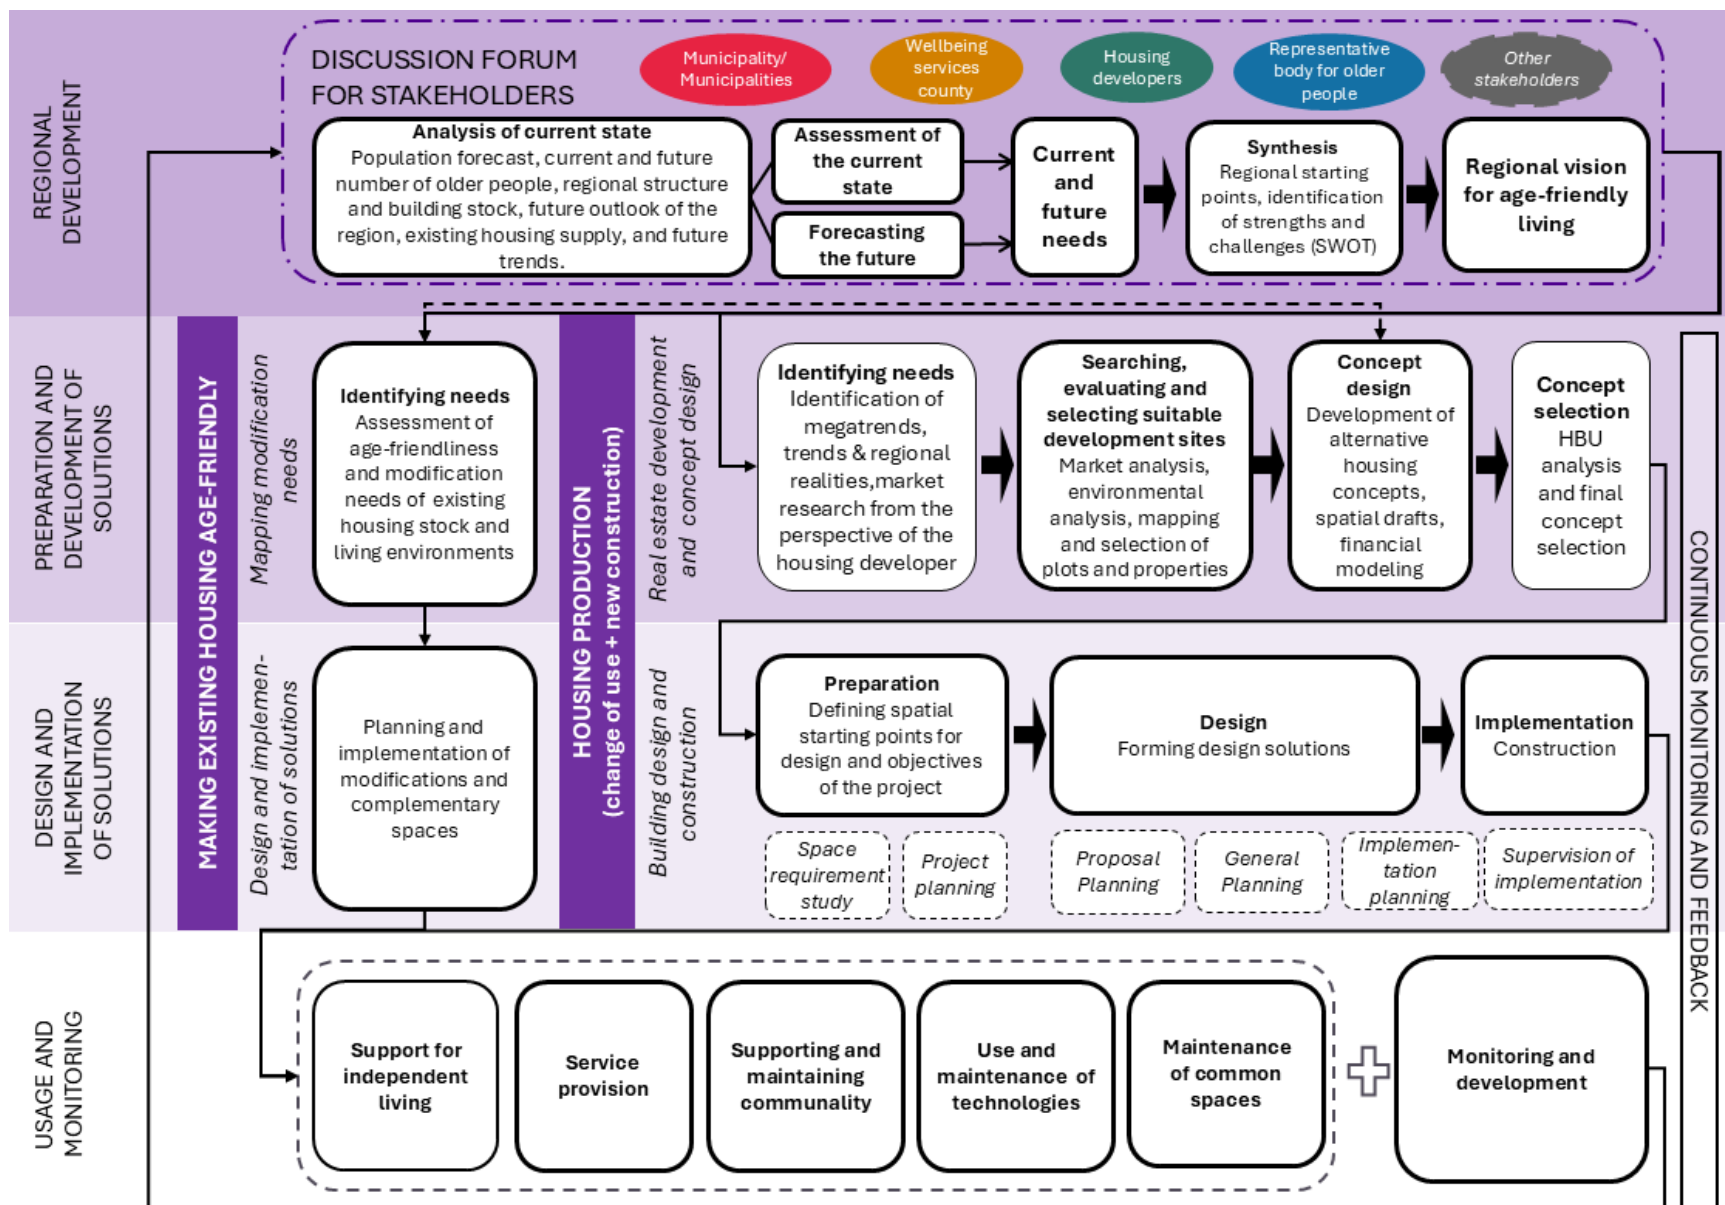

TULE-model's applicability in other countries

- What can be used as such?
 - Process as a whole
 - Guiding principles
 - Recommendations
- What has to be adapted to local operational environment?
 - Stakeholders involved
 - Certain parts of phases
 - Local regulations

Sections of TULE model, their purpose, and connection to different phases of planning, design and construction

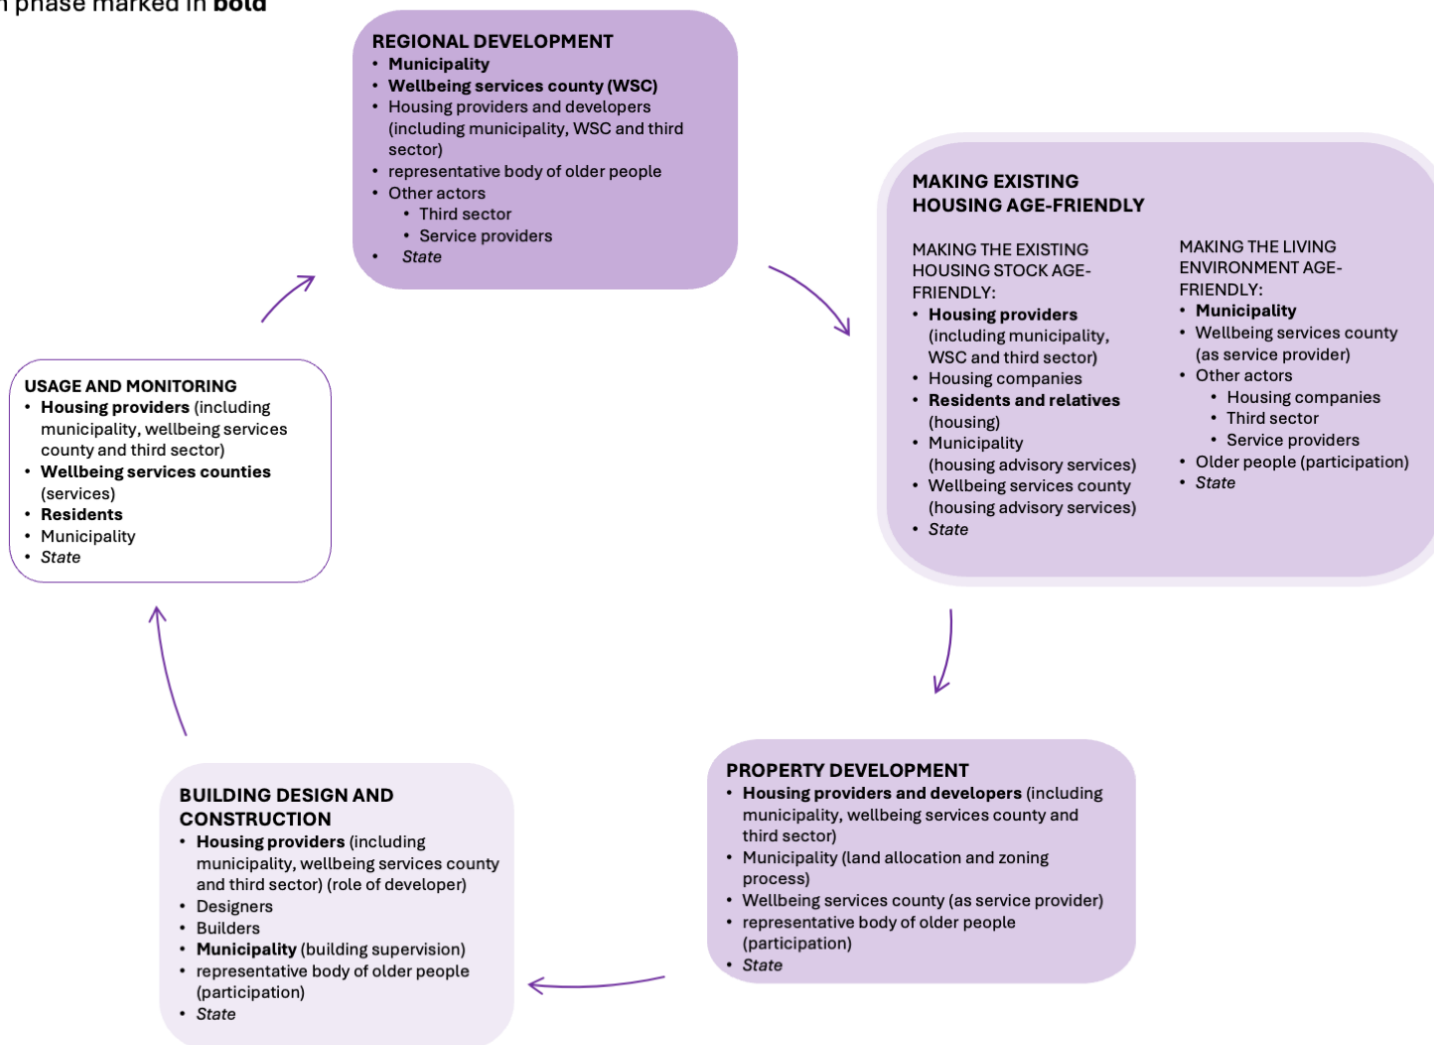

Process diagram of TULE model

Main actors of each phase marked in **bold**

Stakeholders involved in different phases

Content of each phase of TULE-model

REGIONAL DEVELOPMENT – Regional vision for age-friendly living

In the regional development phase, a vision for age-friendly living in the region (municipality/municipalities) is created. This vision is formed in a **discussion forum for age-friendly living**, convened by the municipality/municipalities, bringing together local stakeholders (wellbeing services county, housing developers (social housing + ordinary housing), **representative body for older people**, and other parties important for age-friendly living).

The vision is based on an assessment of the current circumstances and future foresight, carried out through municipality-led analyses. The results of these analyses are discussed among the forum participants, and based on a shared consensus, a **regional vision for age-friendly living** is established to support the development of age-friendly living in the area.

The vision outlines:

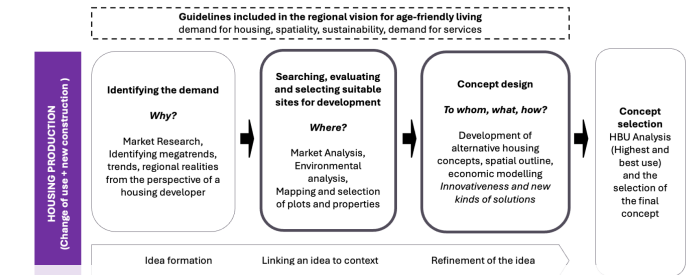

- Quantitative demand for age-friendly housing:**
 - Demand for making the existing housing stock age-friendly
 - Demand for regional community spaces supporting independent living
 - Demand for new dwellings (including change of use + new construction)
- Areas to be developed:**
 - Areas suitable for age-friendly housing
 - Areas suitable for new construction
 - Areas suitable for renovation
 - Consideration of sustainable transportation
- Demand for service development**
 - Services supporting independent living

The discussion forum decides its meeting frequency itself. The municipality and the wellbeing services county act as coordinators, and the municipality maintains up-to-date information on the implementation of the vision (alternative arrangements can also be agreed upon in the forum).

The purpose of the discussion forum is to gather information from different actors, ensure information exchange, and promote cooperation among stakeholders. **The aim of the vision is to create a unified direction and picture of the development of age-friendly living in the region, and thereby support evidence-based decision-making.** The vision is not static but continuously evolving (in line with strategic planning approach). Development is based on collected data and feedback, as well as indicators agreed upon as part of the vision: Is the vision being implemented as planned? Is there a need for changes in actions or guidelines? At certain intervals, a more extensive update of the vision is carried out.

TABLE OF CONTENTS FOR THIS PHASE	
DISCUSSION FORUM FOR STAKEHOLDERS & VISION	11

REAL ESTATE DEVELOPMENT & CONCEPT DESIGN

Phase-specific process

RECOMMENDATIONS FOR MAKING EXISTING HOUSING AGE-FRIENDLY PHASE 1/2

Participation

- Investigate the accessibility needs of the living environment together with older people and their relatives, e.g.
 - Accessibility walks
 - Accessibility surveys

When locating new community spaces, the following should be considered:

- Location of older people in the area**
 - Identification of naturally occurring retirement communities
- Accessibility and reachability of the location**
 - Flat terrain, avoiding slopes over 5% (SuRaKu 2008)
 - Traffic safety
 - Low driving speeds
 - Separated pedestrian and bicycle paths
 - Car-free zones
 - Accessible walking routes
 - Well-lit, sufficiently wide walking routes
 - Winter-maintained walking routes
 - Abundance of resting places (benches)
 - Proximity to a public transport stop or availability of transport services

Increasing awareness and providing guidance

- Both current and future older people should be informed about the importance of an age-friendly living environment and anticipating housing needs
 - Organizing events and information sessions
 - Campaigns
 - Providing
 - Housing advice
 - Renovation advice
 - For housing companies
 - For residents
 - Communicating about events and availability of guidance
 - Examples:
 - Local newspapers
 - Public transport
 - Websites & social media

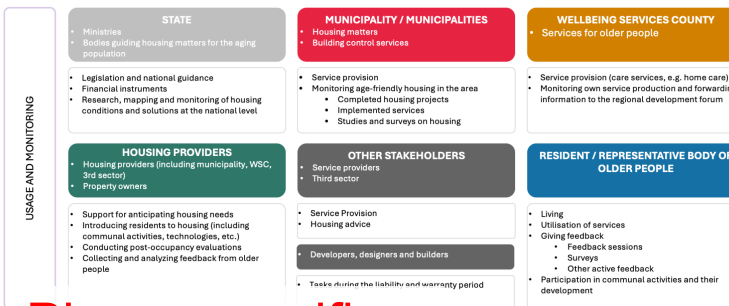

Engage current and as well as family members

- In all decisions and resource wisdom already exists. When new structures, pre changes with flexible
- Selected solutions be suitable for other user groups.
- Ensure diversity an abundance of hours in all decisions and
- Consider community support at different
- Always adapt design solutions to the local

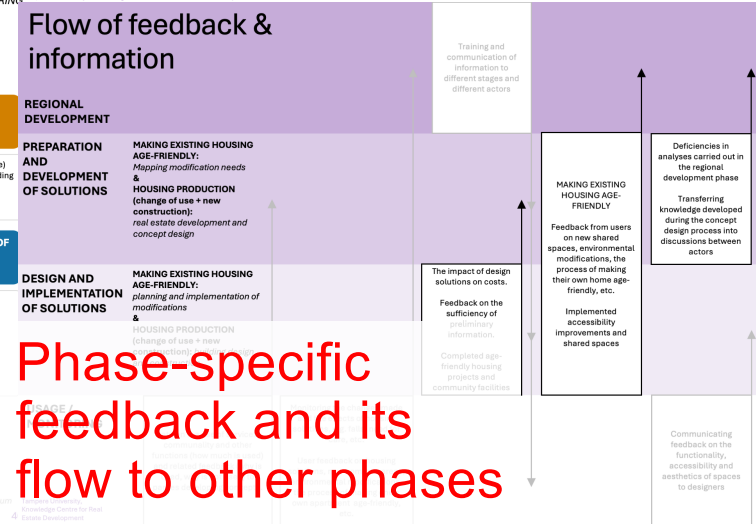

Considerations for making homes age-friendly

- Accessibility**
 - Vision:**
 - All spaces should have sufficient and even lighting, avoiding dim areas and sudden changes in light levels.
 - Glare should be minimized by using curtains or sunshades and avoiding reflective wall or floor surfaces.
 - Interior design should utilize contrast to improve visibility (e.g., stair steps, handrails, bathroom fixtures, glass walls, doors).
 - Mobility and physical control:**
 - Multi-storey buildings should have an elevator or a stair lift.
 - Circulation spaces and doorways should be generously dimensioned.
 - Floor surfaces should be even and non-slip, and firebreaks should be avoided.
 - Partitions should be placed so that they do not obstruct the movement of people.
 - Spaces should enable care and assistance with daily activities (e.g., bathing, etc.).
 - Attention should be paid to the acceptance of assistive devices supporting mobility and activity, ensuring they do not stand out excessively from the rest of the interior.

ROLES OF STAKEHOLDERS

Phase-specific roles of actors

Phase-specific feedback and its flow to other phases

Guiding principles

DESIGN FOR ALL

- Residential and living environments that accommodate diverse needs and promote independence

SUSTAINABILITY

- Take into account and utilize existing resources
- Flexible and resilient new solutions & production

PLACE-BASED SOLUTIONS

- Locally adapted solutions based on identified conditions

COMMUNALITY

- Fostering and supporting communality at all levels through various actions

PARTICIPATION

- Including aging population and utilizing their expertise when developing housing and services
- Diverse methods of participation

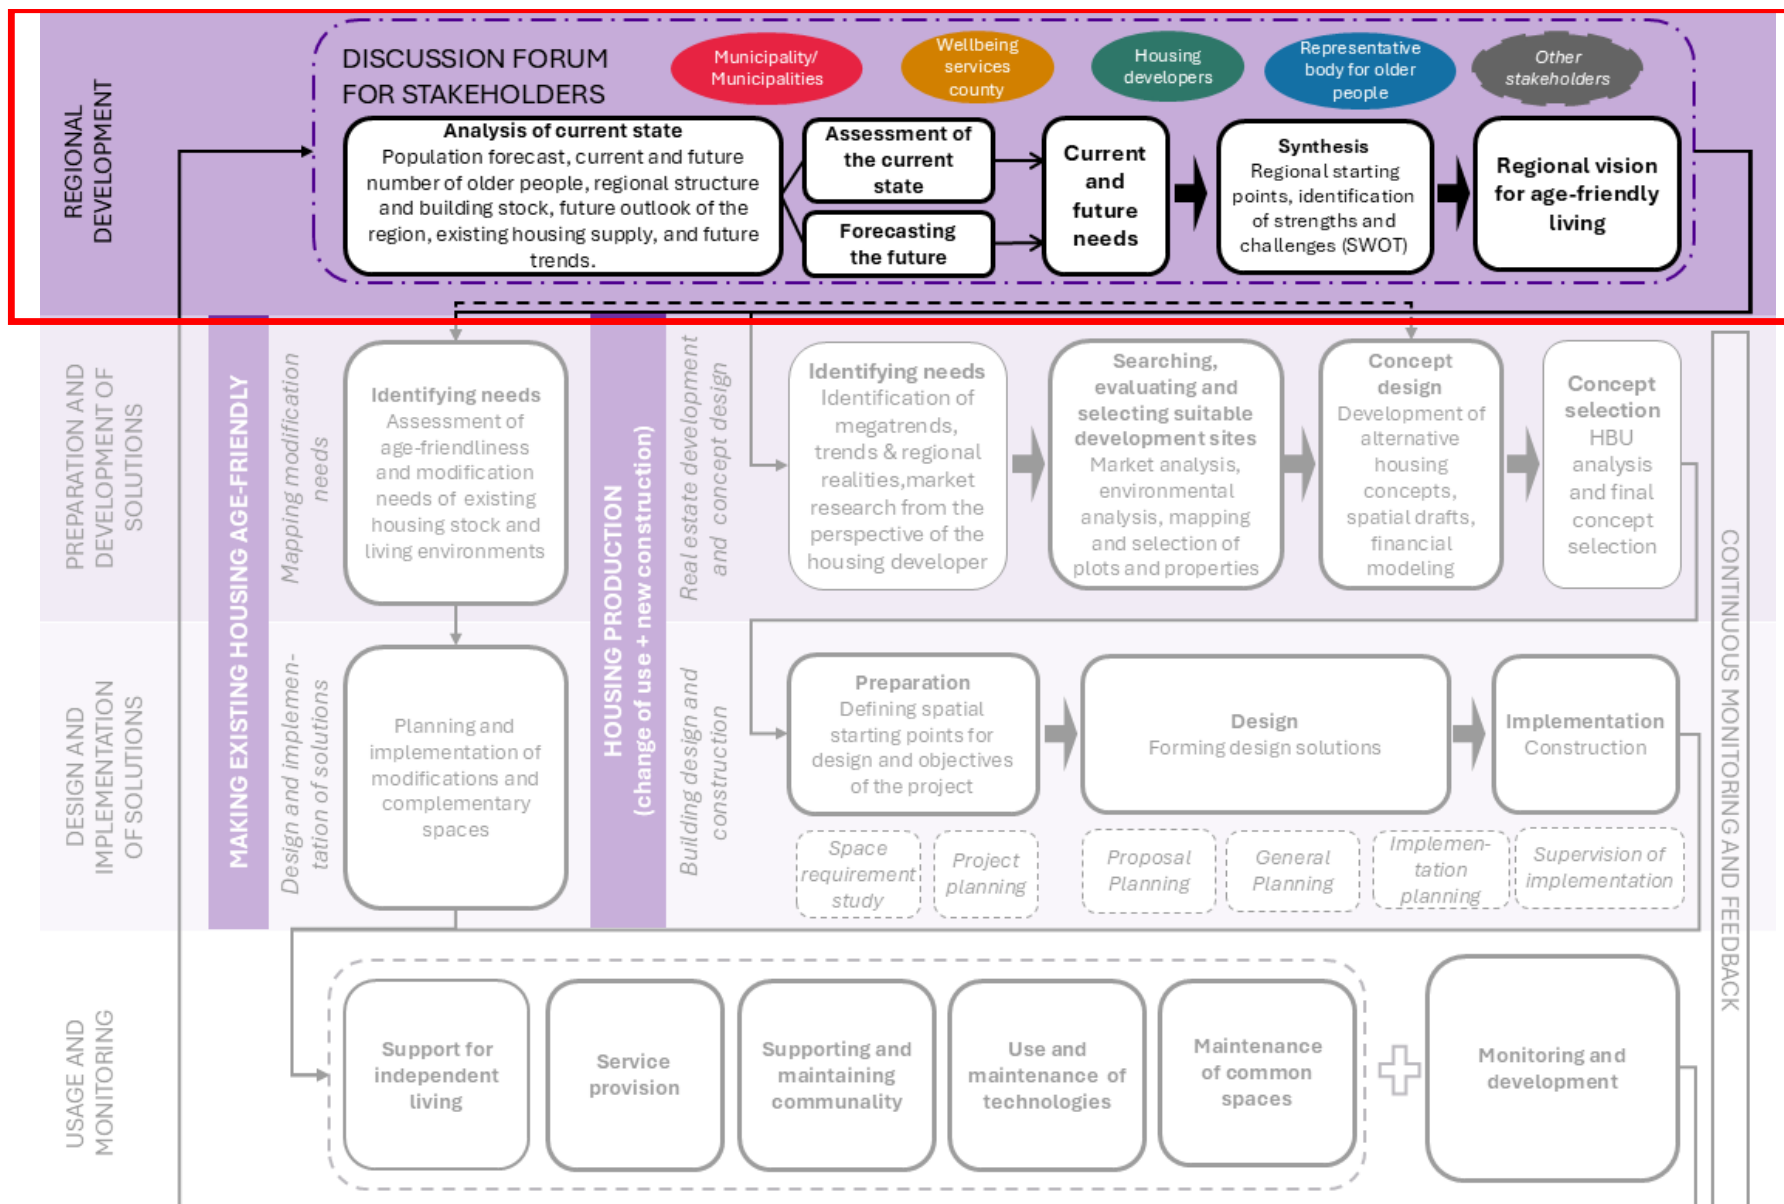

DIVERSITY

- Various options designed to reflect the diverse preferences and the diversity of present and future older populations

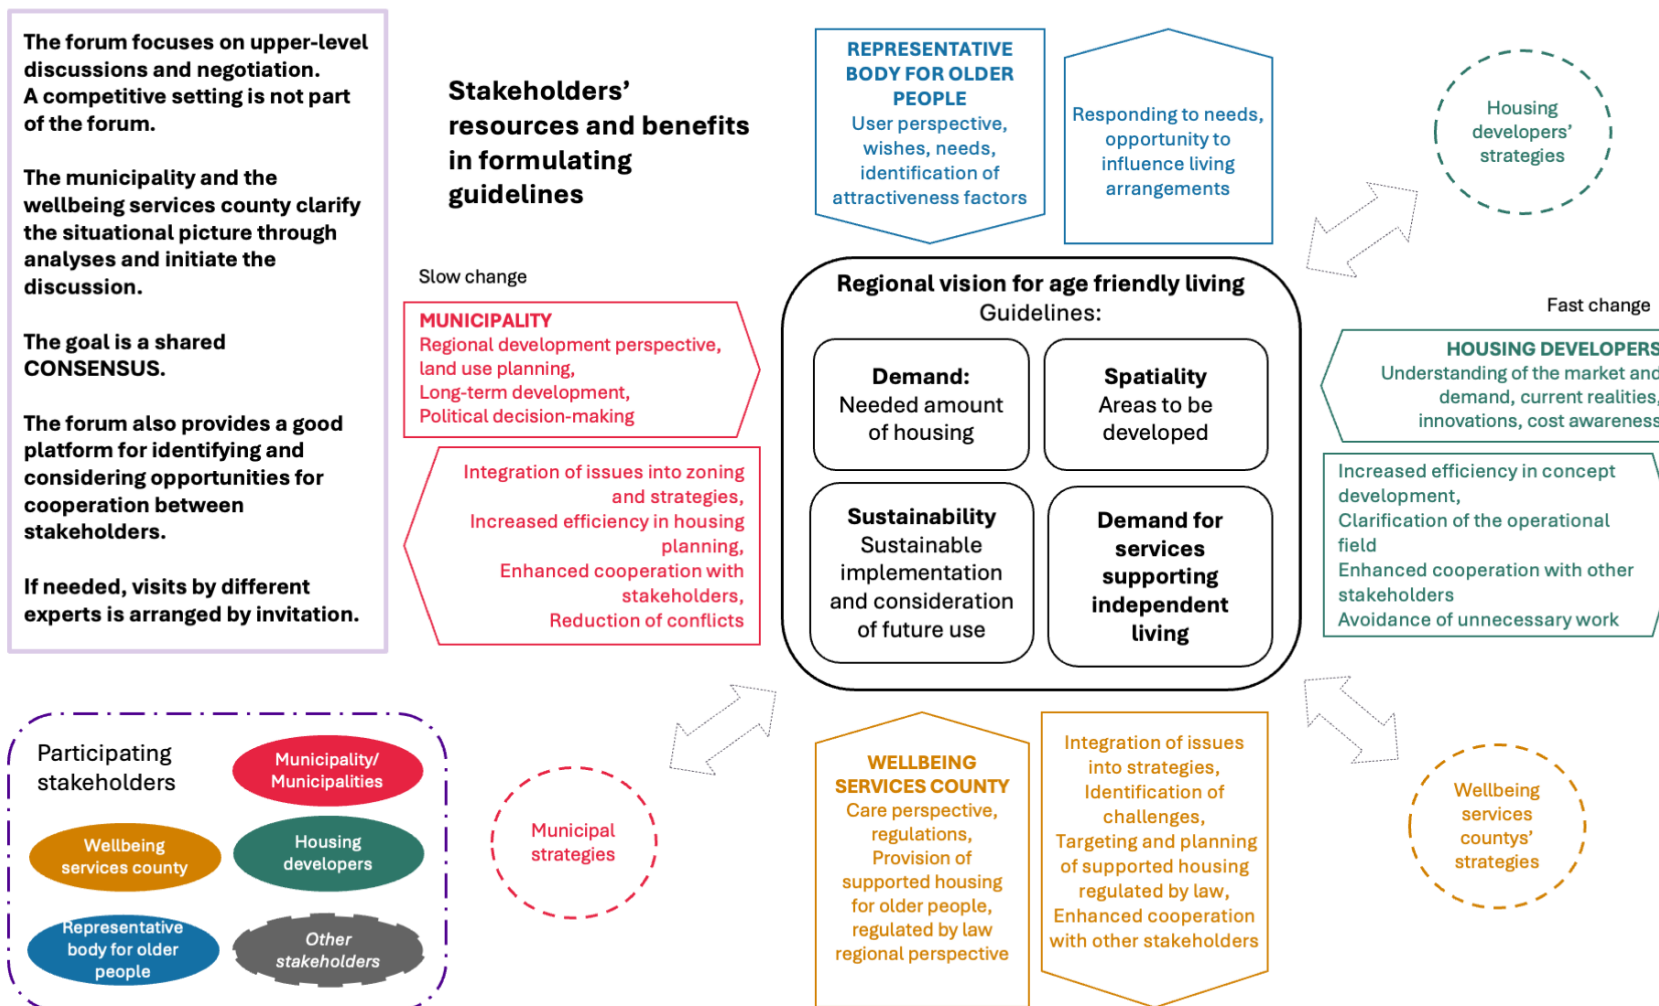

INNOVATIONS AND CHANGE IN ATTITUDE

- Open-mindedness & novel solutions
- Embracing and valuing aging

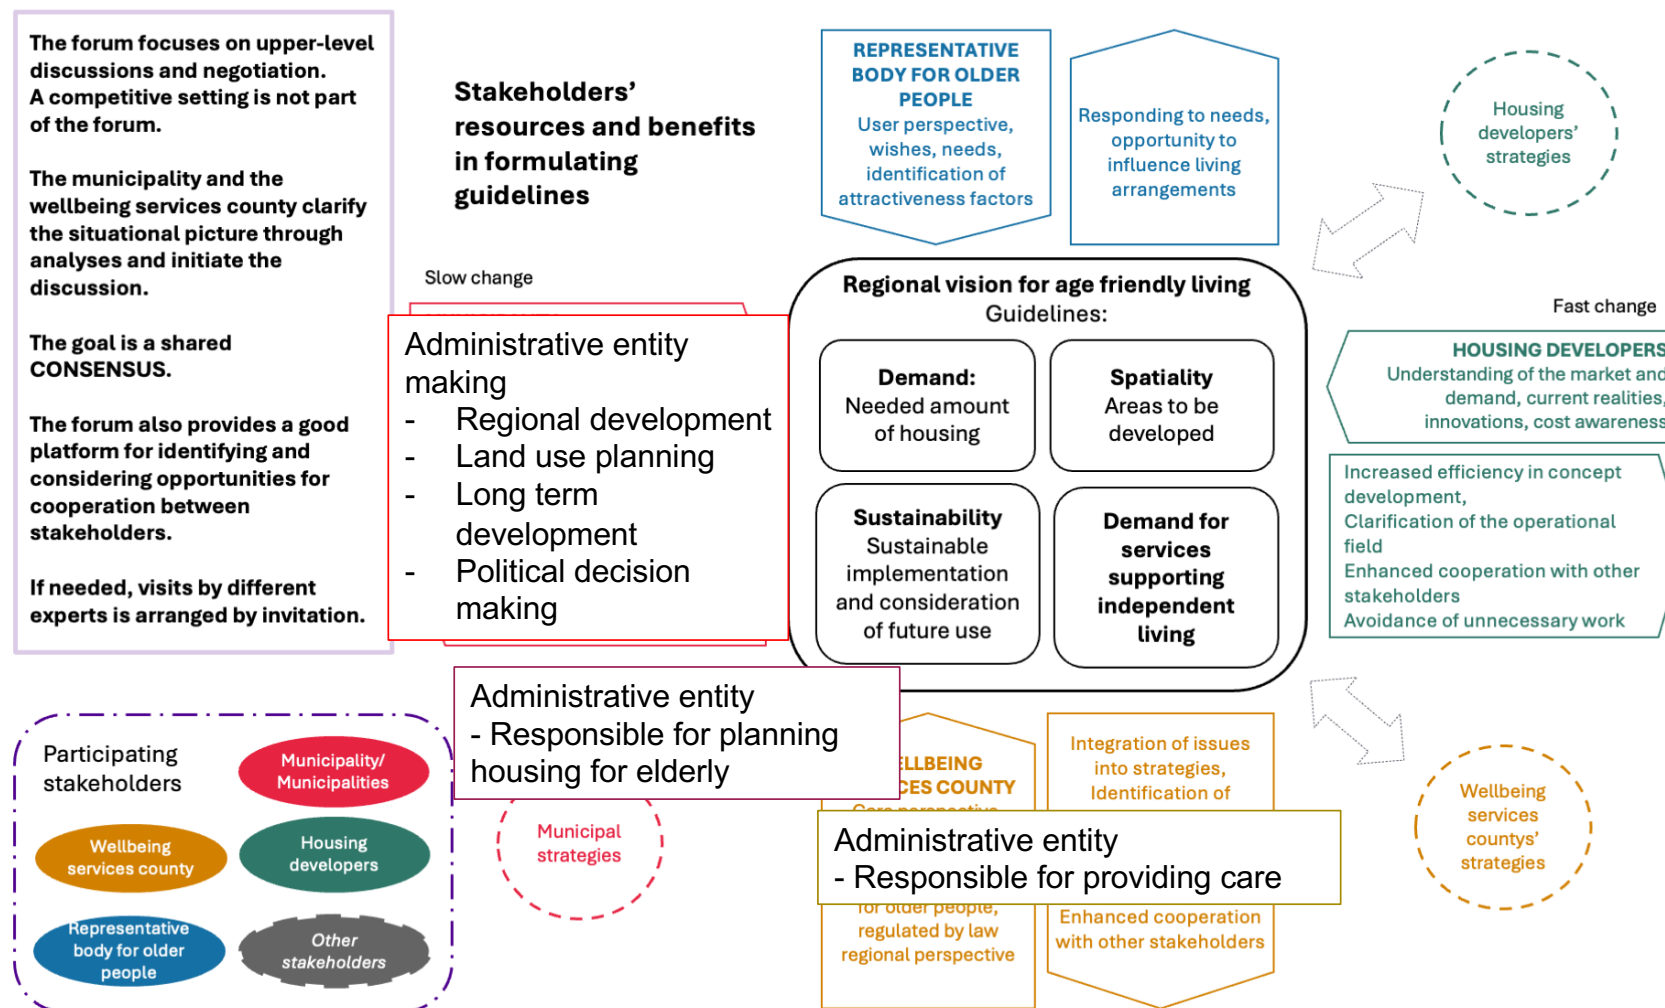

Regional development: Regional Vision for Age-Friendly Living

DISCUSSION FORUM FOR STAKEHOLDERS & VISION

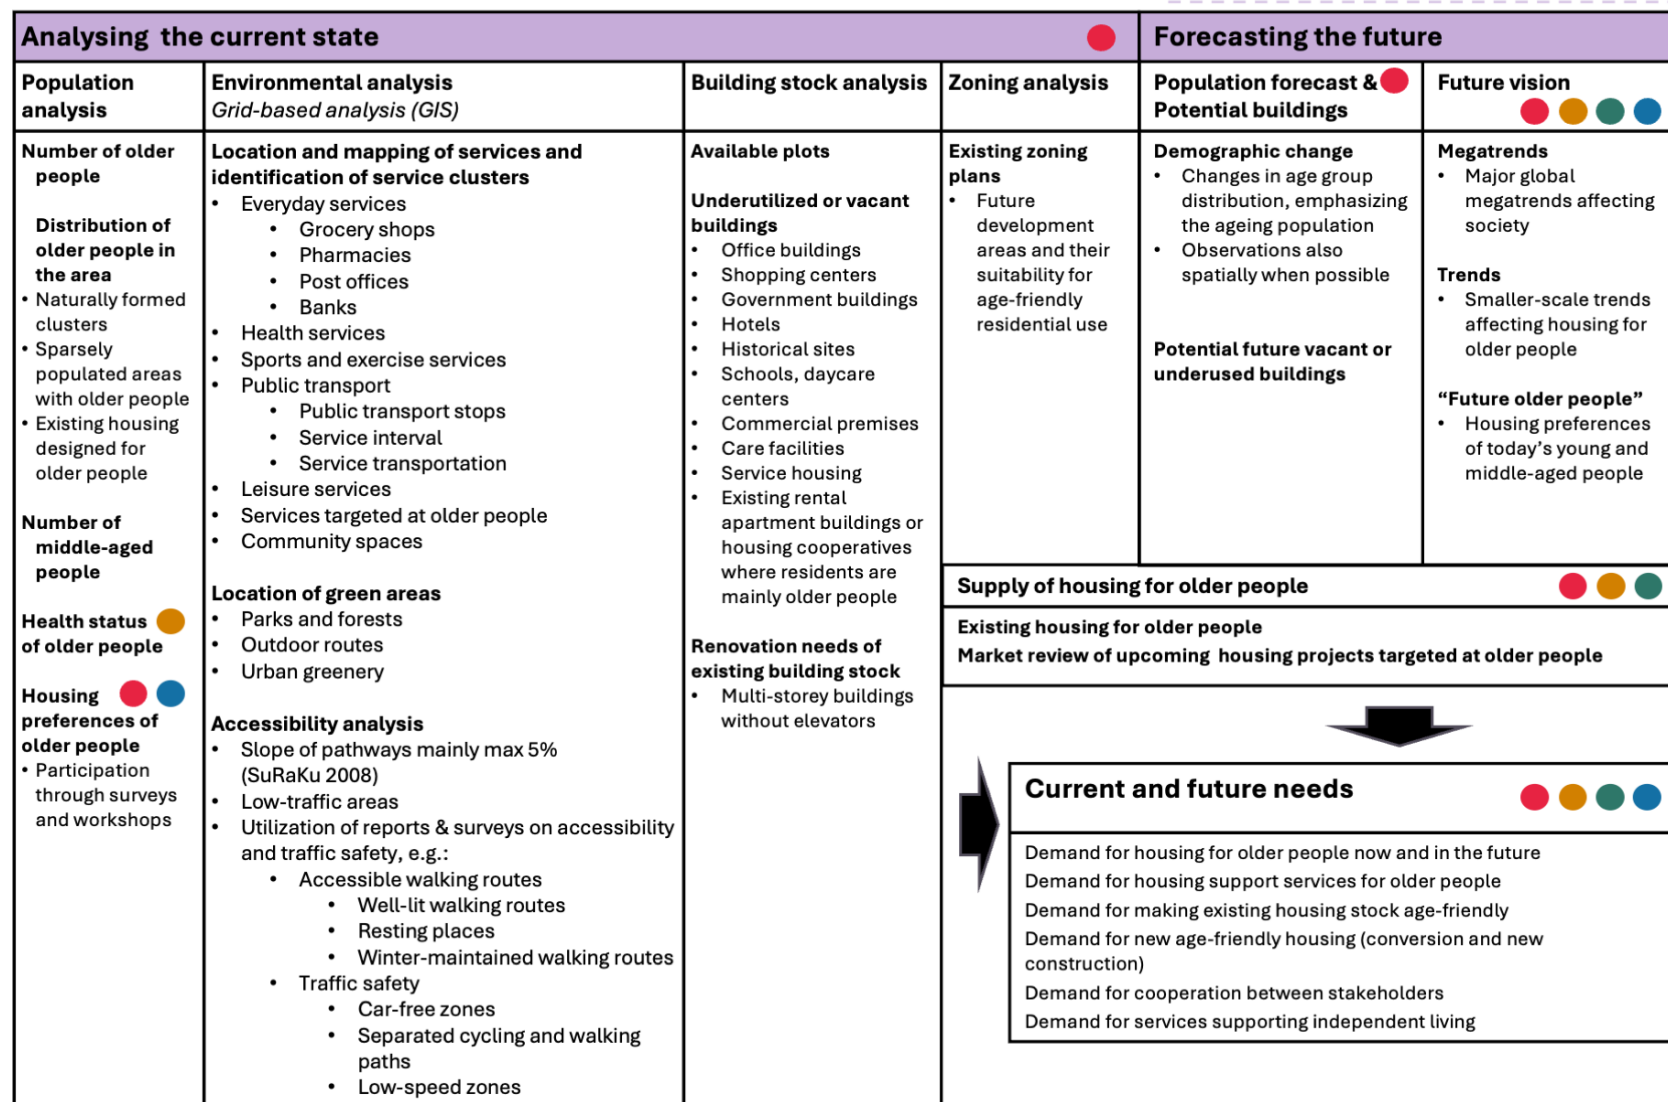

DISCUSSION FORUM FOR STAKEHOLDERS & VISION

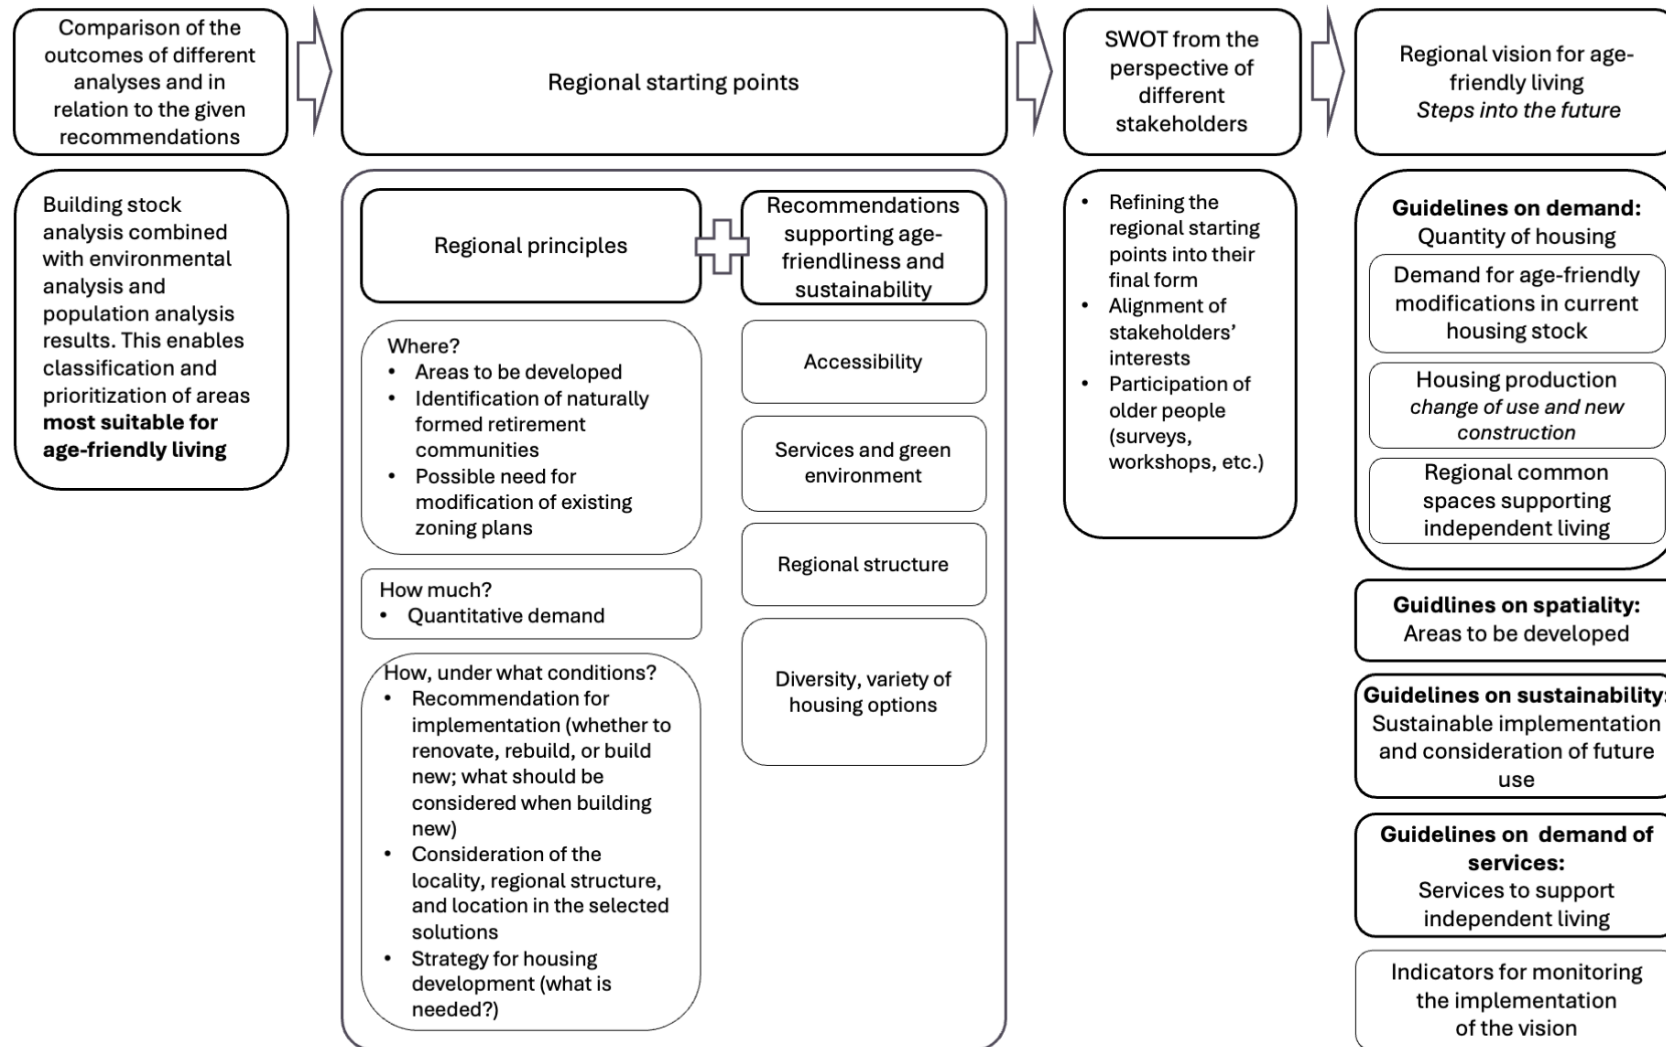

ANALYSIS OF CURRENT STATE & CURRENT AND FUTURE NEEDS

Guidelines of public strategies

SYNTHESIS & VISION

RECOMMENDATIONS FOR THE REGIONAL DEVELOPMENT PHASE

Factors influencing the spatial realization of the vision

When locating housing, the following must be considered:

Location of services and green areas

For age-friendly living, it is important to ensure:

- Direct connection to nature (green views, yard enabling outdoor activities, outdoor route within <500 m)
- Proximity to services (grocery store, pharmacy, etc. <500 m)
- Proximity to a public transport stop or availability of transport services
- Proximity to leisure services: library, theatres, cafés, restaurants, etc.

Accessibility of the immediate environment

For age-friendly living, it is important to consider:

- Flat terrain, avoiding slopes over 5%
- Low-traffic
 - Low driving speeds
 - Separated pedestrian and bicycle paths
 - Car-free zones
- Accessible walking routes
 - Well-lit walking routes
 - Winter-maintained walking routes
 - Abundance of resting places (benches)

Location of older people in the area

- Recognition of needs
- Identification of natural retirement communities

New Construction vs. Renovation

If the population is expected to decline significantly in the future, priority should be given to:

- Age-friendly modifications in current housing stock
- Utilizing vacant spaces
- Renovations
- Change of use
- Relocatable and reusable structures (circular economy)

Impact of forecasts and regional structure on the vision

- When assessing quantity and locating housing, future forecasts and regional structure must be considered
- Housing should primarily be located in or near service clusters
- All housing solutions must consider multi-functionality and the possibility of changes in use in the future
- The more sparsely populated the municipality is and the longer the distances, the more attention must be paid not only to housing solutions but also to mobile services and service transportation

Engage current and future users as well as family members.

In all decisions and solutions, resource wisdom should be prioritized by developing what already exists. When building new structures, prepare for changes with flexible solutions.

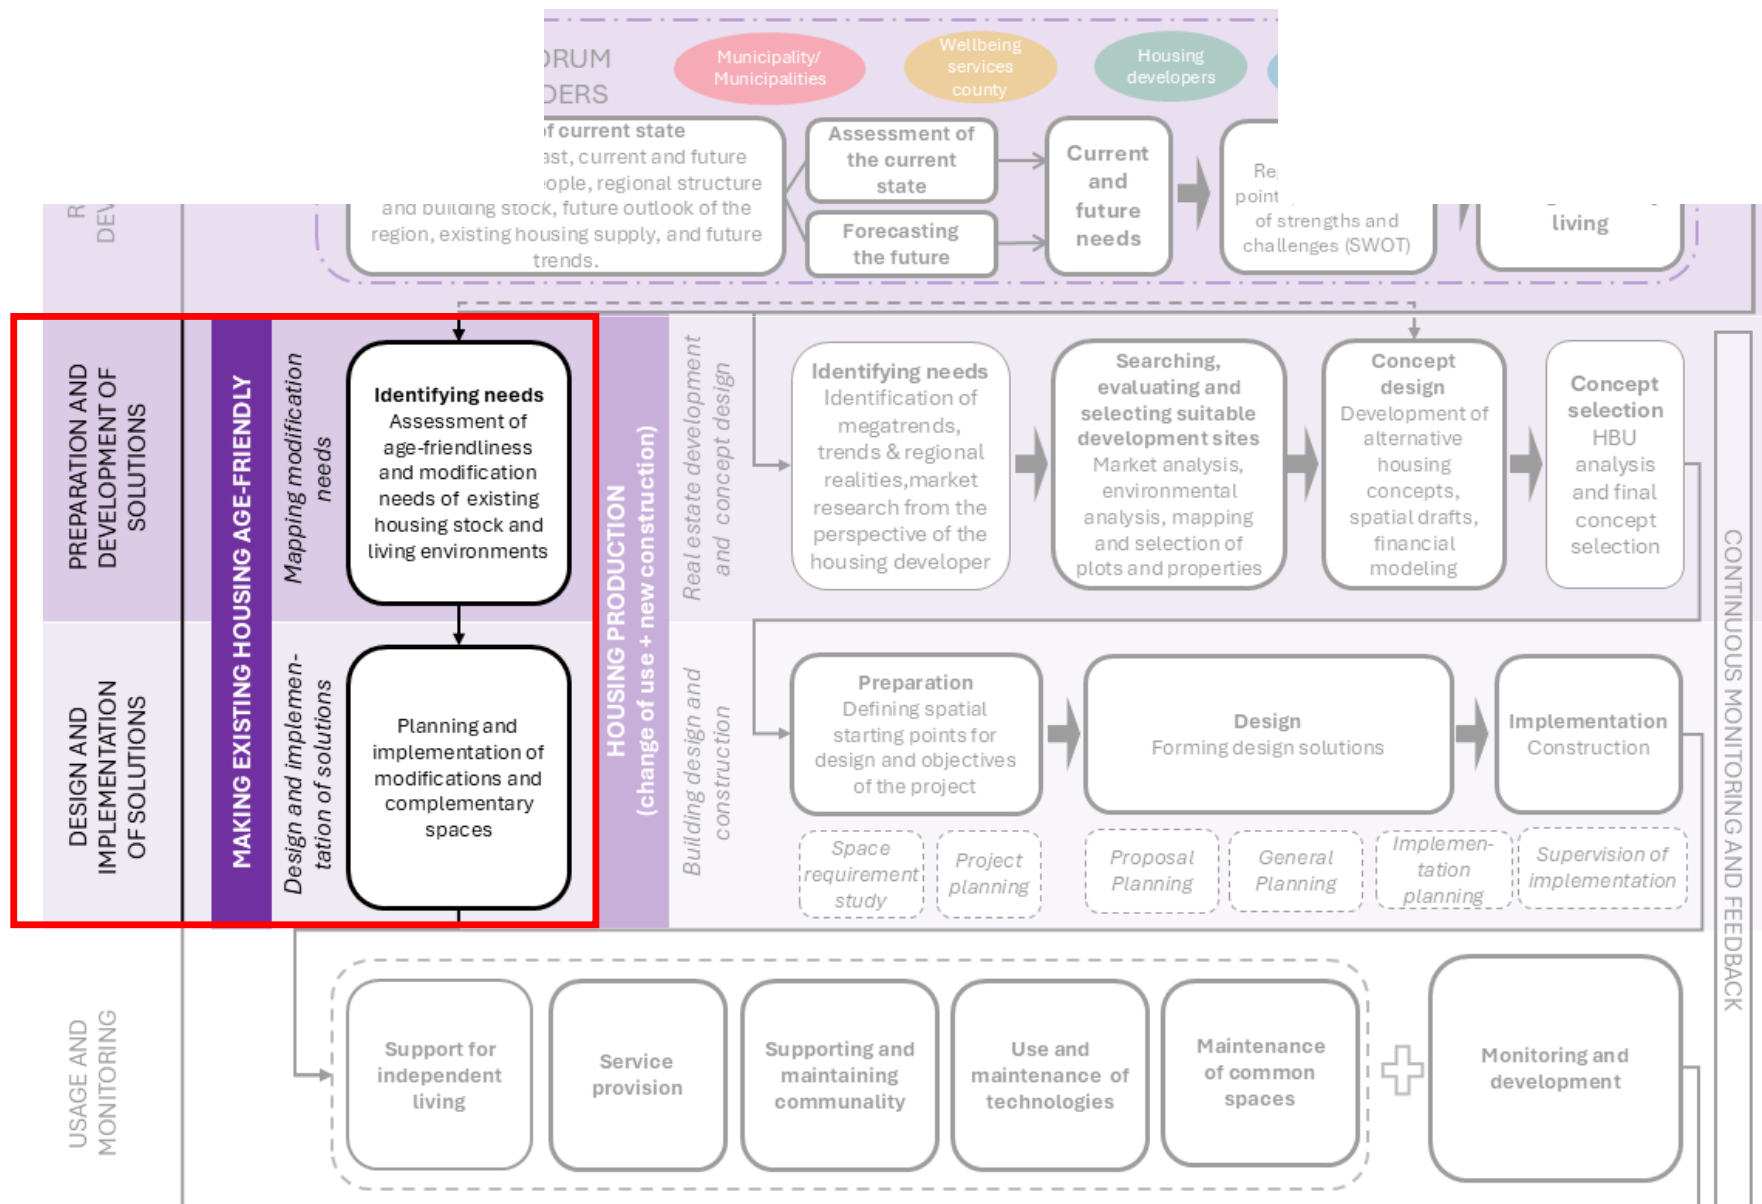

Selected solutions must also be suitable for other age and user groups.

Ensure diversity and abundance of housing options in all decisions and solutions.

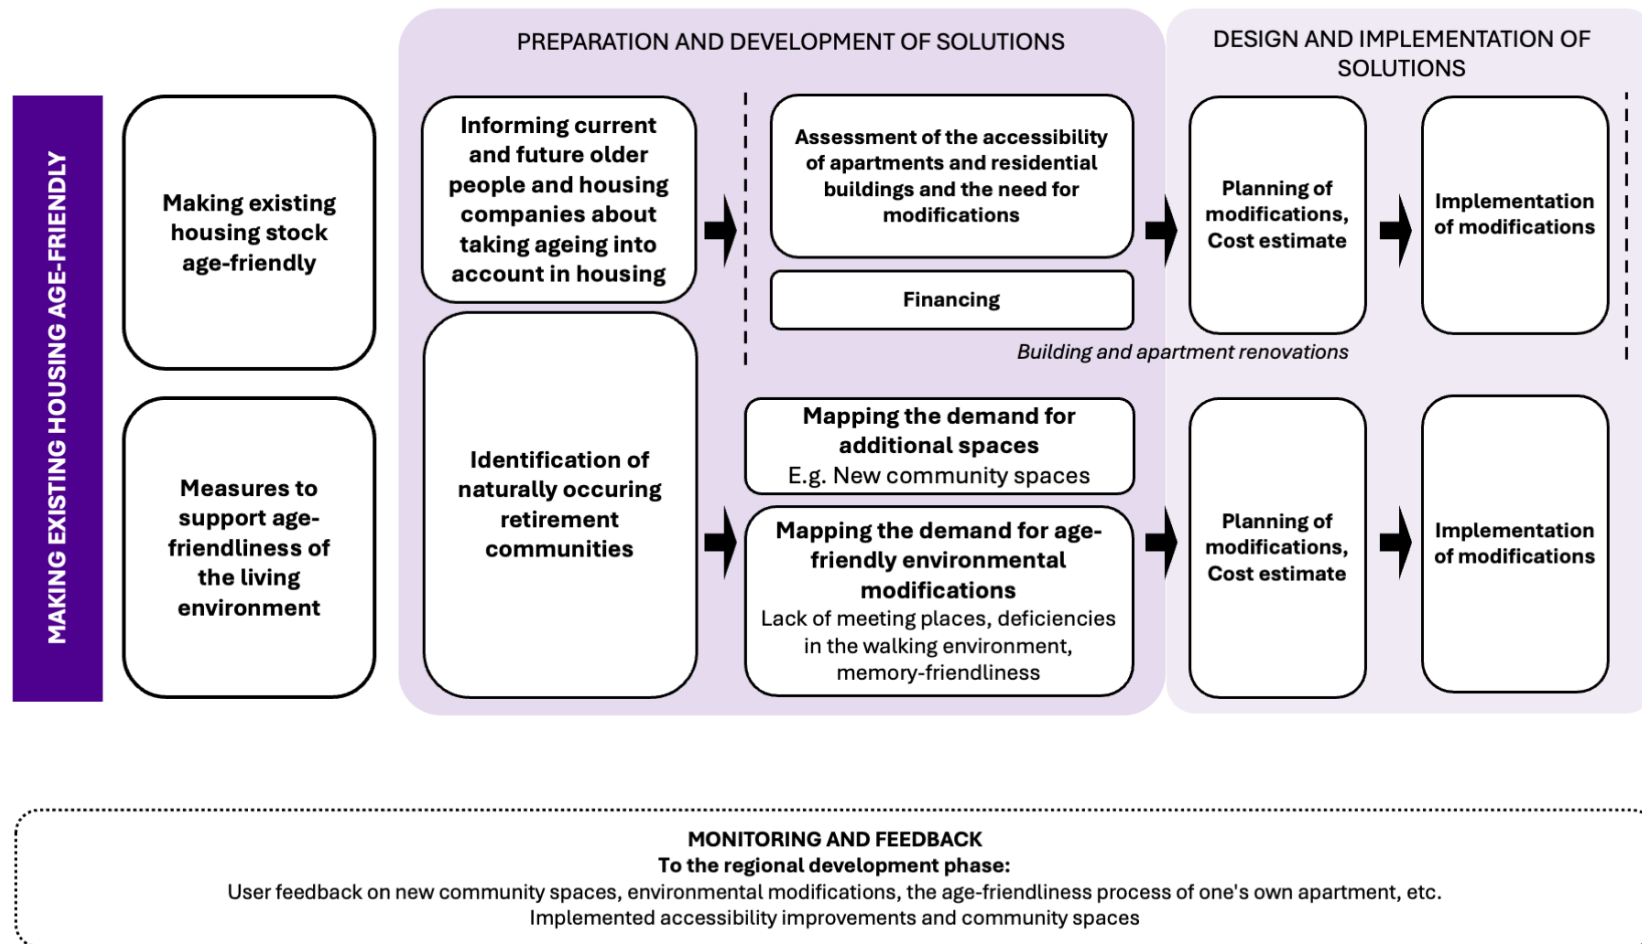

Consider community and its support at different levels.

Always adapt decisions and solutions to the local context.

Making existing housing age-friendly

MAKING EXISTING HOUSING AGE-FRIENDLY

RECOMMENDATIONS FOR MAKING EXISTING HOUSING AGE-FRIENDLY PHASE 1/2

Participation

- Investigate the accessibility needs of the living environment together with older people and their relatives, e.g.
 - Accessibility walks
 - Accessibility surveys

When locating new community spaces, the following should be considered:

Location of older people in the area

- Identification of naturally occurring retirement communities
- Accessibility and reachability of the location**
 - Flat terrain, avoiding slopes over 5% (SuRaKu 2008)
 - Traffic safety
 - Low driving speeds
 - Separated pedestrian and bicycle paths
 - Car-free zones
 - Accessible walking routes
 - Well-lit, sufficiently wide walking routes
 - Winter-maintained walking routes
 - Abundance of resting places (benches)
 - Proximity to a public transport stop or availability of transport services

Increasing awareness and providing guidance

 - For housing companies
 - For residents
 - Communicating about events and availability of guidance

Examples:

 - Local newspapers
 - Public transport
 - Websites & social media

Engage current and future users as well as family members.

In all decisions and solutions, resource wisdom should be prioritized by developing what already exists. When building new structures, prepare for changes with flexible solutions.

Selected solutions must also be suitable for other age and user groups.

Ensure diversity and abundance of housing options in all decisions and solutions.

Consider community and its support at different levels.

Always adapt decisions and solutions to the local context.

Considerations for making homes age-friendly

1. Accessibility

- Vision:**
 - All spaces should have sufficient and even lighting, avoiding dim areas and sudden changes in light levels.
 - Glare should be minimized by using curtains or sunshades and avoiding reflective wall or floor surfaces.
 - Interior design should utilize contrast to improve visibility (e.g., stair steps, handrails, bathroom fixtures, glass walls, doors).
- Mobility and physical control:**
 - Multi-storey buildings should have an elevator or a stair lift.
 - Circulation spaces and doorways should be generously dimensioned.
 - Floor surfaces should be even and non-slip, and thresholds should be avoided.
- Memory-friendliness**
 - Entrances should allow personalization (for example, with a picture or a piece of furniture)

2. Functionality and comfort of spaces

- Apartment dimensions should consider storage needs (e.g., assistive devices and incontinence product deliveries).
- Spaces should enable care and assistance with daily activities (e.g., bathing etc.).
- Attention should be paid to the appearance of assistive devices supporting mobility and activity, ensuring they do not stand out excessively from the rest of the interior.

RECOMMENDATIONS FOR MAKING EXISTING HOUSING AGE-FRIENDLY PHASE 2/2

Considerations for designing the additional common spaces

1. Accessibility

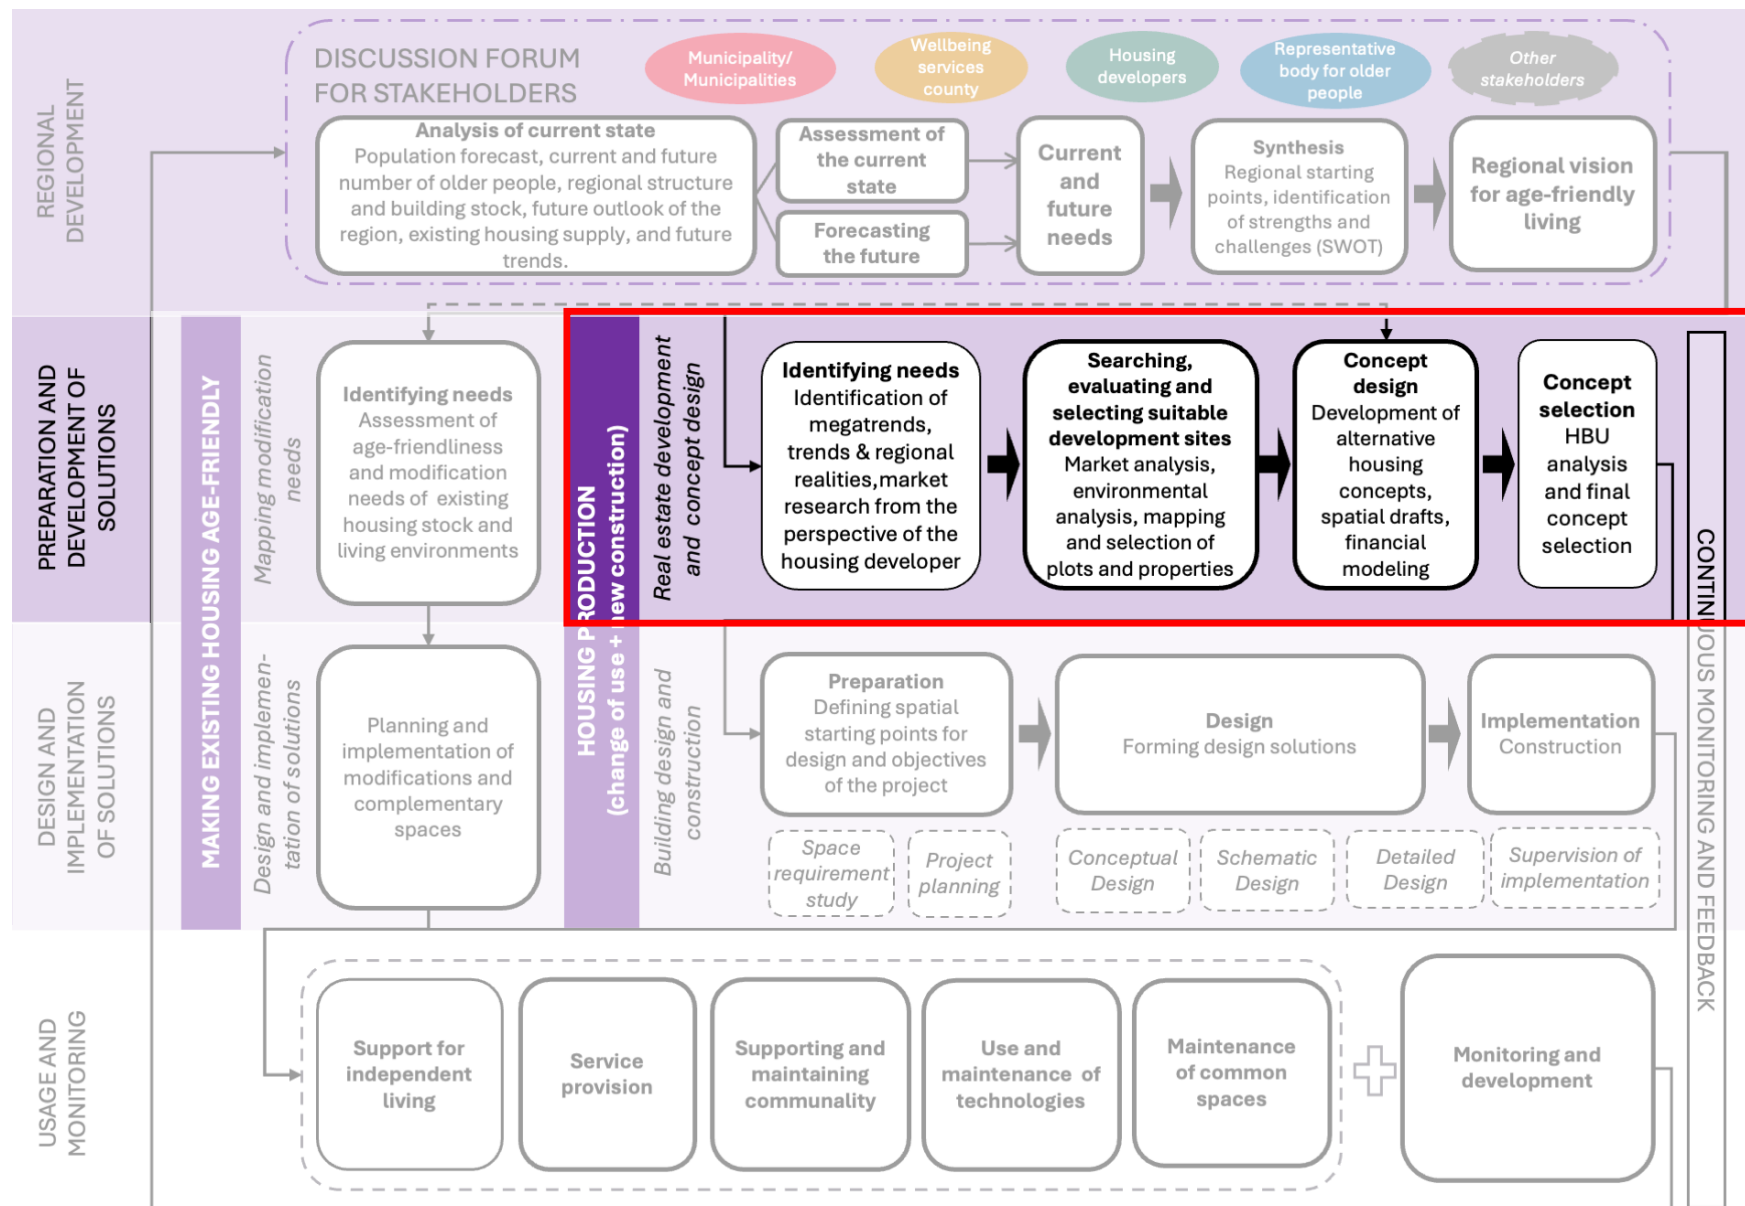

- **Vision:**
 - All spaces should have sufficient and even lighting, avoiding dim areas and sudden changes in light levels.
 - Glare should be minimized by using curtains or sunshades and avoiding reflective wall or floor surfaces.
 - Interior design should utilize contrast to improve visibility (e.g., stair steps, handrails, bathroom fixtures, glass walls, doors).
- **Kuulo:**
 - Common spaces should use materials that reduce echo and noise, such as acoustic panels
 - The layout of spaces and soundproofing solutions should ensure that sounds do not carry from one space to another
- **Mobility and body control**
 - Multi-storey buildings should have an elevator or a stair lift.
 - All circulation areas should have handrails
 - Circulation areas and doorways should be generously dimensioned
 - Floor surfaces should be even and non-slip, and thresholds should be avoided
 - Resting places should be available in circulation areas and outdoor spaces
 - An accessible toilet should be located adjacent to common spaces.
- **Memory-friendliness**
 - Long, maze-like corridors and repetitive spatial layouts should be avoided
 - Routes should mainly consist of sequences of functional spaces, where people using these spaces act as landmarks
 - Visual connections between spaces should be enabled

- Colors and aids should be used to facilitate navigation (e.g., each floor has its own color code)
- Entrances should be designed to stand out from the façade
- Outdoor activities should be possible in a safe environment

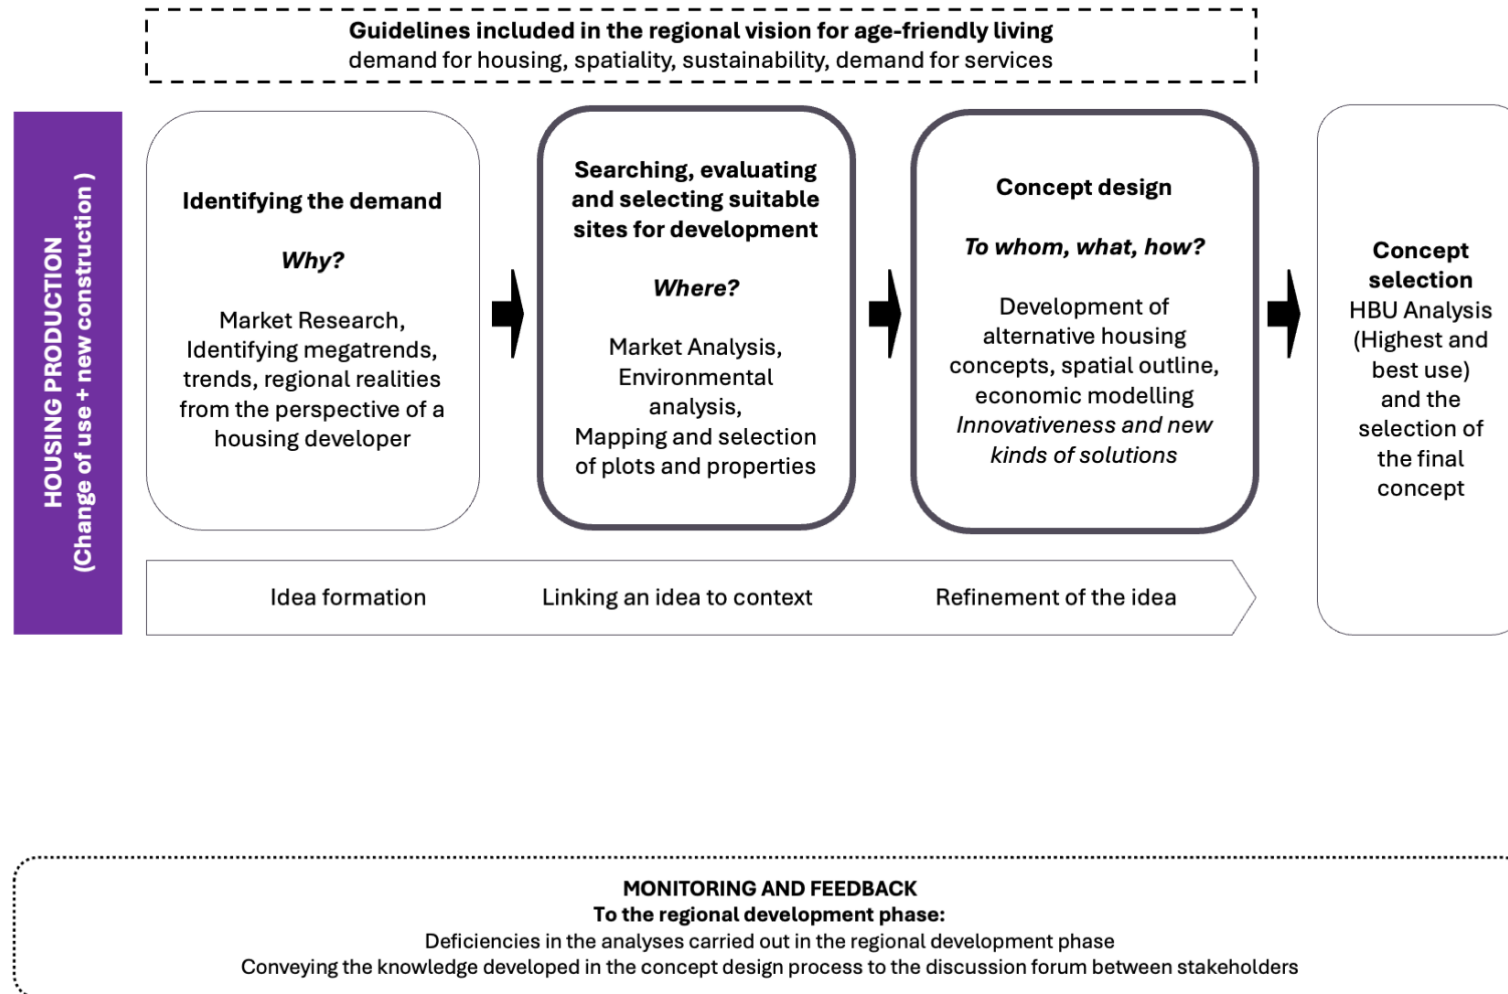

2. Functionality and comfort of spaces

- Attention should be paid to the appearance of mobility and activity aids so that they do not stand out excessively from the rest of the interior
- Aesthetics should be considered when choosing furniture and materials
- Sufficient space should be reserved for the needs of operators

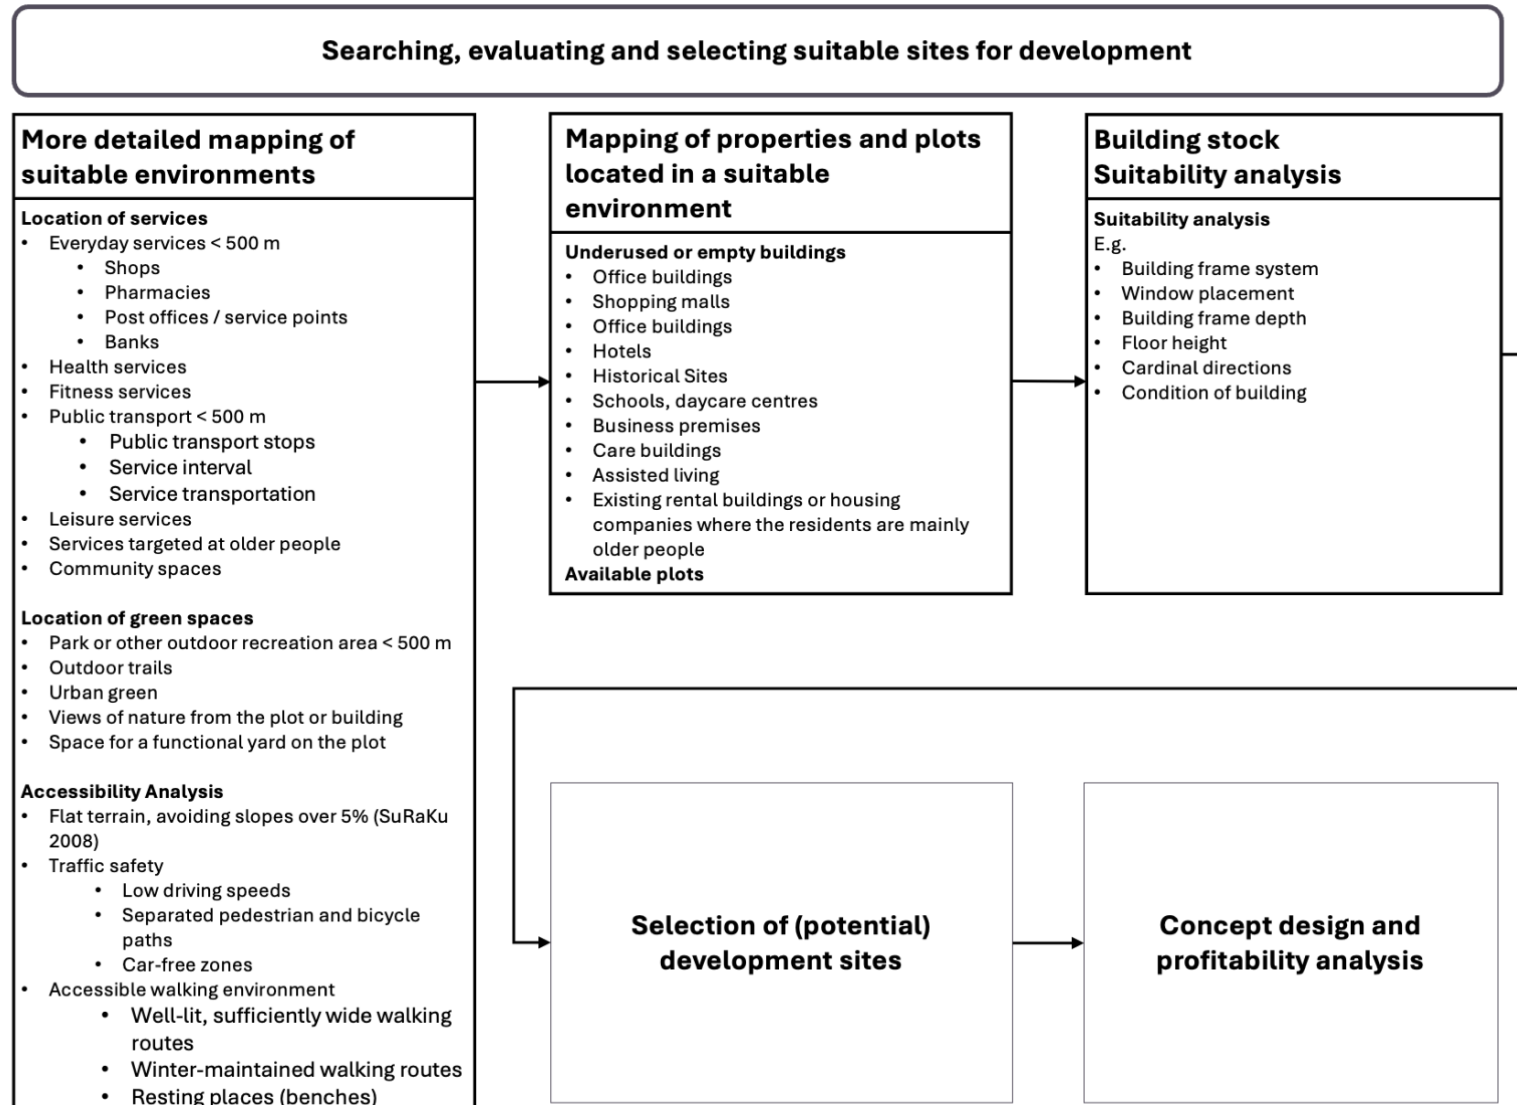

Real estate development and concept design

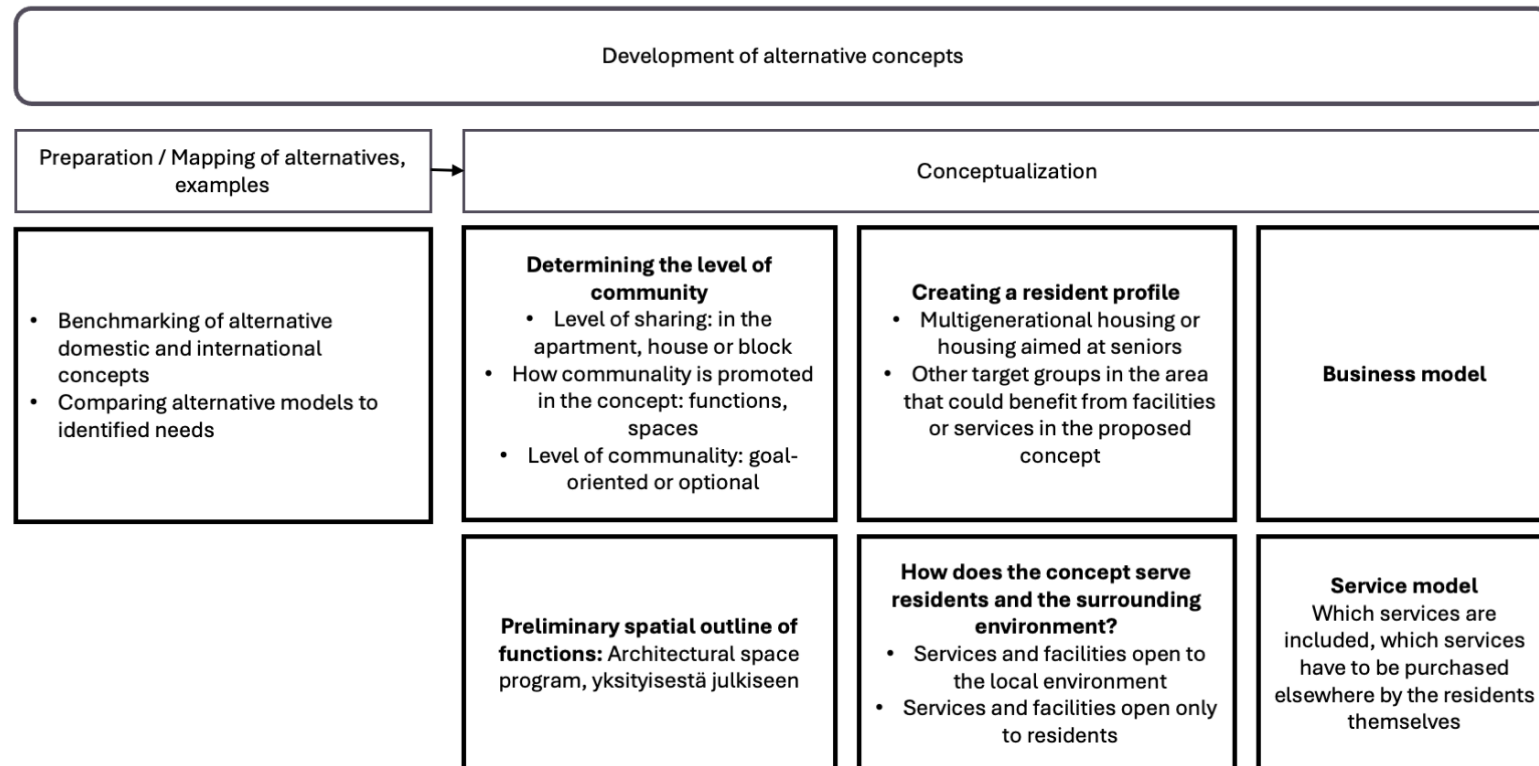

REAL ESTATE DEVELOPMENT & CONCEPT DESIGN

Searching, evaluating and selecting suitable sites for development

Concept design

RECOMMENDATIONS FOR THE REAL ESTATE DEVELOPMENT AND CONCEPT DESIGN PHASE

Participation

- Involve older people and their relatives in concept development, e.g.
 - Workshop
 - Surveys mapping housing preferences
 - Surveys to test housing concepts

Intergenerationality

- When developing housing concepts, take intergenerationality into account and try to enable meeting places for different generations, e.g.
 - Spaces and services open to non-residents
 - Housing with a mixed-age population (no age limit)

Affordability

- When developing age-friendly housing, the affordability of housing and other housing-related costs should be ensured

Sustainability

- Consider potential alternative uses for the property already at the concept stage, in case the current intended use is no longer needed in the future.
- Prioritize (when possible) existing building stock (especially in areas where housing demand may decrease in the future).

Diversity

- Take into account the diverse needs and preferences of older people when developing concepts
 - Different needs for communality
 - Different housing preferences
 - Varying need for support
- **There are no one-size-fits-all solutions, many kinds of solutions are needed**

Accessibility (see also p. 21)

- When mapping a suitable site or plot, take into account:
 - Proximity to services and communal spaces
 - Proximity to green spaces and opportunities for outdoor activities on the plot
 - Accessible location

Effects of the regional structure on services

- The more sparsely populated the locality and the longer the distances in the area, attention should be paid not only to housing solutions, but also to mobile services and service traffic/transport services.

Cooperation between actors

- When developing concepts, opportunities for cooperation and partners (service providers, foundations, voluntary organisations, municipal actors, etc.) should be mapped out.
 - To organize activities or services
 - To share spaces

Engage current and future users as well as family members.

In all decisions and solutions, resource wisdom should be prioritized by developing what already exists. When building new structures, prepare for changes with flexible solutions.

Selected solutions must also be suitable for other age and user groups.

Ensure diversity and abundance of housing options in all decisions and solutions.

Consider community and its support at different levels.

Always adapt decisions and solutions to the local context.

Yhteisöllisyys

Yhteisöllisyyden kohdentuminen valitse 1 tai useita

Y1a Ikääntyneiden välinen yhteisöllisyys

- Ikääntyneille suunnattua asumista/toimintaa
- Ikärajatut kohteet/toiminnot

Y1b Monisuku- polvinen yhteisöllisyys

- Ikääntyneille sekä muun ikäisille suunnattua asumista/toimintaa
- Sekoitettu asukaskanta
- Myös monisukupolvinen asuminen perheen sisällä

Yhteisöllisyyden muodostuminen valitse 1 tai useita

Y3a Itse- organisoituva yhteisöllisyys

- Yhteisöllisyys nojaa asukkaiden aloitteellisuuteen

Y3b Tuettu yhteisöllisyys

- Yhteisöllisyyttä tuetaan palveluin ja toiminnoin
- Esim. yhteisöllisyyskoordinaattori

Yhteisöllisyyden sitouttavuus valitse 1

Y2a Mahdollinen yhteisöllisyys

- Asukkaille yhteisöllisyys on vaihtoehtoista eikä yhteisöllisyys ole asumisen keskeinen tavoite
- Asukkaita ei sitouteta yhteisöllisyyteen

Y2b Tavoiteltu yhteisöllisyys

- Yhteisöllisyys on tavoitteellista ja keskeinen osa asumismuotoa
- Asukkaat ovat aktiivisesti mukana kehittämässä yhteisöllisyyttä, järjestämässä toimintaa ja yhteisön arkea
- Vaatii:
 - Asukkailta sitoutumista yhteisöllisyyteen
 - Halua tutustua naapureihin
- Esim. Yhteisöasuminen

Yhteisöllisyyden tilallisuus valitse 1 tai useita

- **Asunnon sisäinen yhteisöllisyys**
- Asunto jaetaan useamman asuntokunnan kesken
 - Soluasuminen
 - Kimppa-asuminen
 - Ryhmäkodit
- Ei soveltu kaikille
- Varmistettava asukkaille riittävä yksityisyys

- **Asuntojen välinen yhteisöllisyys**
- Asukkailla on omat asunnot, mutta he jakavat asunnon ulkoisia yhteisiä tiloja
- Yhteisöasuminen
- Yhteisöllinen asuminen
- Asuminen, jossa riittävät yhteistilat sosiaaliseen kanssakäymiseen
- Vaatii yhteistiloja rakennukseen

- **Asuinympäristön sisäinen yhteisöllisyys**
- Kaikille avoimet tilat tai toiminnot
- Kiinnitettävä huomiota turvallisuuteen ja yhteistilojen sijoittamiseen

Starting to create a new concept

EXAMPLE CONCEPT:

” AGE COMMUNITY IN RURAL AREA”

- Theme: Communality
- Resident segment: Resident activist longing for the peace and quiet of the countryside
- Context: Sparsely populated rural area

AGE COMMUNITY IN RURAL AREA

- Location of everyday activities in the concept and their degree of privacy

Asunto	Rakennus + Piha-alue	Asuinalue
Yksityinen	Puoliyksityinen	Julkinen
Nukkuminen	Harrasteet	
Oleilu		
Peseytyminen	Kulkuneuvojen säilytys	
WC		
Ruokailu		

IKÄYHTEISÖ MAASEUDULLA

- Konseptiprofiili
- Yhteisöllisyys
- Yhteisöllinen moduulikyylä ympärivuokautaisen yksikön läheisyydessä

Moduulikyylässä asuminen on suunnattu yli 65 -vuotiaille

Moduulikyylän asukasyhdistyksellä sopimus hyvinvointialueen kanssa päivätoiminnan järjestämisestä, josta asukasyhdistys saa varoja yhteisön ylläpitoon

- Lähellä asuvat ikääntyneet sekä ympärivuokautaisen asumisen asukkaat voivat kaksi kertaa viikossa vierailla yhteisön yhteisissä tiloissa, jossa järjestetään erilaista yhteisöllistä toimintaa asukkaiden johdolla

104 m2 yhteisötalomoduli (4 moduulia)
Yhteisökeittiö + ruokailutila
Oleskelutila (hyödynnetään myös liikuntaan)
Sauna pesutiloineen
Yhteisöpiha
• Puutarha + oleskelupiha
• Viljelypalsta

26 – 52 neliön 1-2 hengen asuntomodulit
1-2 h + k
Oma keittiö ja kylpyhuone
Voidaan räätälöidä asukkaan yksilöllisiin tarpeisiin (kalusteet, materiaalit, valaistus)

- Yksittäisistä siirrettävistä moduuleista koostuva moduulikyylä ympärivuokautaisen yksikön läheisyydessä (sama moduulitoteutus)**
- Moduuleja voidaan tilata lisää lyhyellä aikataululla ja palauttaa tarpeen loppuessa kiertoon.
 - Vuokrataan valmistajalta, joka palauttaessa purkaa moduulin osiin ja käyttää osat uudelleen, tai vuokraa moduulit edelleen
 - Itsenäisessä asumisessa käytössä olevat moduulit voivat hoivan tarpeen lisääntyessä siirtää osaksi ympärivuokautista yksikköä jatkopalan avulla.

Tampereen yliopisto, Kiinteistökehittämisen osaamiskeskus

Tavoitellaan yhteisöllistä elämäntapaa:

- Suunniteltua yhteisöllistä toimintaa (esim. viikottainen yhteinen ruokailu)
- Yhteiset säännöt ja toimintatavat

- Asukkaat vastuussa yhteisöllisestä toiminnasta
- Asukkailla yhdessä jaetut roolit sekä vastuut yhteisöllisen toiminnan ylläpitämisessä

Tavoiteltu yhteisöllisyys

Asukaslähtöinen yhteisöllisyys

Ikääntyneiden välinen yhteisöllisyys

YHTEISÖLLISYYS

INTERAKTIIVINEN

Asuinyhteisön yhteinen viestintäaalusta

Tekoälyä hyödyntävä älykalenteri

- Sovittaa asukkaiden kalenterit yhteen ja avustaa yhteisen toiminnan aikataulutuksessa

Viestintä-tekniologiat

TEKNOLOGIAT

Terveystä ja toimintaa monitoroivat ja tukevat teknologiat

Talo-tekniikka ja kodin automaatio

PASSIIVINEN

Oppivaa tekoälyä hyödyntävä älykotialusta

- Säätelee:

- Kodin olosuhteita monitoroivat anturit:
 - Lämpötila- ja kosteussensorit
 - Kodinkoneiden ja kodinelektronikan aikakatkaisu (esim. liesivahti, tuloveden katkaisu)
 - Älyvalaistus
- Aurinkopaneelit
 - Optimoivat paneelien kulman ja suunnan maksimoidakseen energian saannin
- Energian kulutus (kodinkoneet yms.)
 - Ajustaa kodinkoneet sähkön hinnan mukaan

PASSIIVINEN

Automaattihälytys hätätilanteessa (kaatuminen yms.)

- Ohjautuu ympärivuokautaisen asumisen yksikköön

Toimintaa seuraavat anturit

- Gps-anturi, jossa yksilöllisesti määritettävä turva-alue
 - Hälyttää valitun naapurin ja viimekädessä Ympärivuokautaisen hoivan, jos poistuu alueelta

INTERAKTIIVINEN Lääkeautomaatti

INTERAKTIIVINEN

Kaksi kertaa viikossa vieraileva itseajava itsepalvelu kauppabussi (toimittaa myös paketteja)

Mahdollisuus ateriapalveluun ympärivuokautaisen asumisen yksiköstä

PASSIIVINEN JA INTERAKTIIVINEN

Itseajava yhteiskäyttöauto

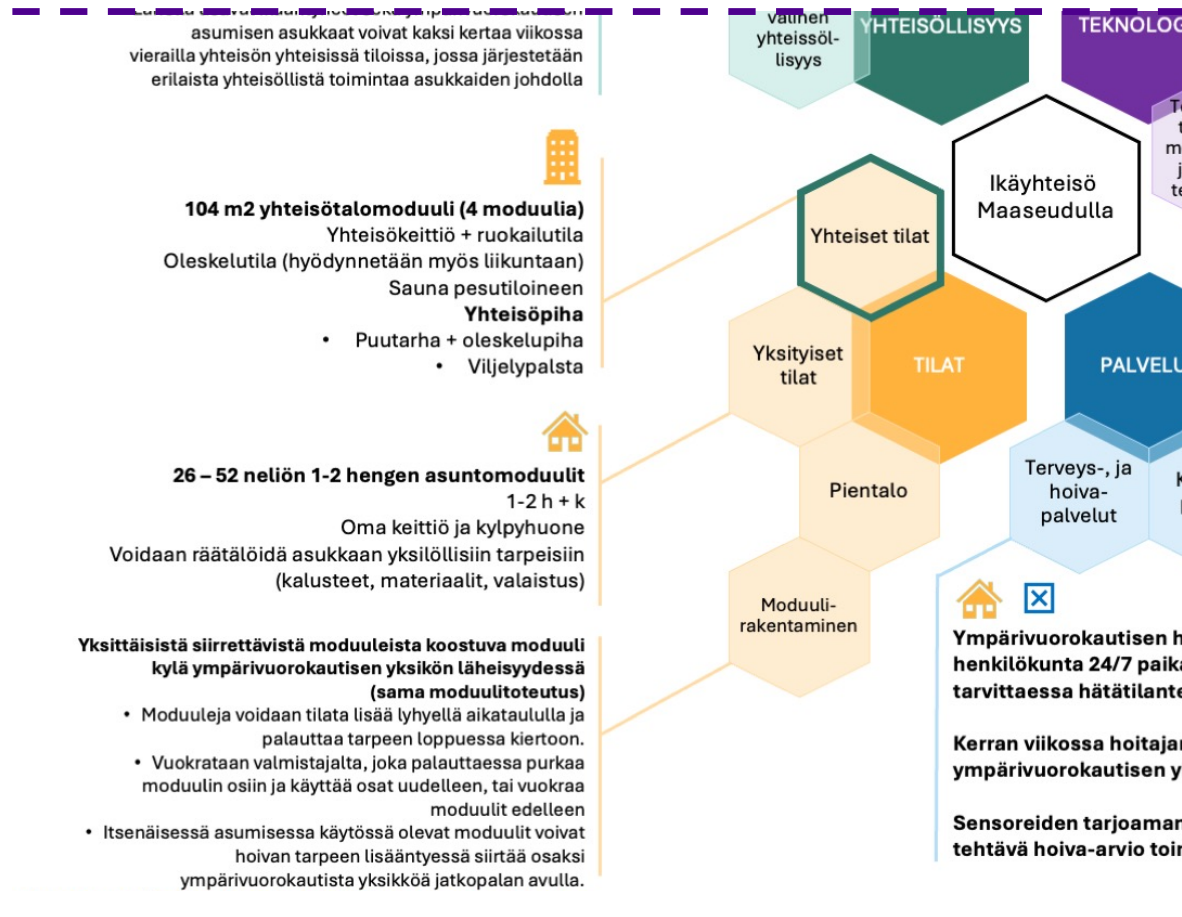

- Varataan älykalenterin kautta
- Kimppekyytipalvelu
- Apin kautta varattava kimppekyyti

Ympärivuokautaisen hoivan yksikön henkilökunta 24/7 paikalla ja tarjoavat apua tarvittaessa hätätilanteissa

Kerran viikossa hoitajan ja lääkärin vastaanotto ympärivuokautaisen yksikön tiloissa

Sensoreiden tarjoaman informaation perusteella tehtävä hoiva-arvio toimintakyvyn heiketessä

HILJA'S DAY – Copilot's perspective on a resident's life

Hilja Laine wakes up early, as she usually does. The morning sun filters through the curtains, and the familiar sound of the coffee maker hums from the kitchen. She rises calmly, takes her morning blood pressure medication, and sits at the kitchen table. Outside, it's quiet. Beyond the field, the edge of the forest rises, and the community garden plot bathes in the early light. This is exactly what Hilja longed for when she decided to leave the city behind.

In her previous apartment, Hilja spent a lot of time alone. Evenings passed in front of the television, and although she wasn't unfamiliar with solitude, the silence began to feel heavy. Life is different now. Living with neighbors requires some effort—meetings, shared duties, and responsibilities—but it brings security. And having things to do keeps her active. Of course, sometimes someone irritates her, but clear rules and agreed practices help in tricky situations. Issues are discussed openly and respectfully. So far, everything has been resolved.

When Hilja moved to the modular village six months ago, she was able to choose the details of her housing module herself. The kitchen cabinets were installed at just the right height so she wouldn't have to stretch. The flooring was chosen for good grip—she had fallen once in her old home, and the fear lingered. The wall colors are soft and calming, just as she wished. Home feels like home.

In the bathroom, the washing machine starts quietly. Hilja pauses to listen and smiles to herself. She had loaded the laundry and detergent last night—the machine now runs on a timer, based on electricity prices. “Technology moves so fast, it's hard to keep up,” she mutters. She doesn't care much for tech and doesn't want to fuss with devices, but these automated solutions have been useful. Her electricity bill has gone down, and all she needs to do is close the door. If something goes wrong, she asks the caregivers for help. “Young people know,” she shrugs. One feature she truly values is the automatic emergency alert. If she were to fall or something happened, the signal would go straight to the nearby 24-hour care unit. That brings peace of mind.

In the late morning, Hilja checks the community notice board to see what's planned for today: a shared lunch in the community kitchen and afternoon activities with visitors from the care unit and nearby villages. She promised to bring dessert—a blackcurrant pie with berries she picked yesterday from the garden plot. In the kitchen, she mixes the dough and adds the berries to the pie

dish. While the pie bakes, she steps outside to greet Martta, who is raking the path in the shared yard. “Is it that famous pie again?” Martta asks. “Yes, but with less sugar,” Hilja replies with a smile.

The community kitchen is warm and lively. Aila and Reijo set the tables, and Martti brings herbal tea he dried in the community garden. Meals are prepared together—today it's Reijo's turn to cook the main dish, and Aila is in charge of salads. They chat around the kitchen table: about the weather, the berry harvest, and the upcoming residents' meeting where responsibilities will be assigned again. Hilja is thinking of volunteering for the community hall cleaning duty next month—it's light work and a good chance to catch up with others. The activity schedule, garden care, and cooking shifts are also decided at the meeting.

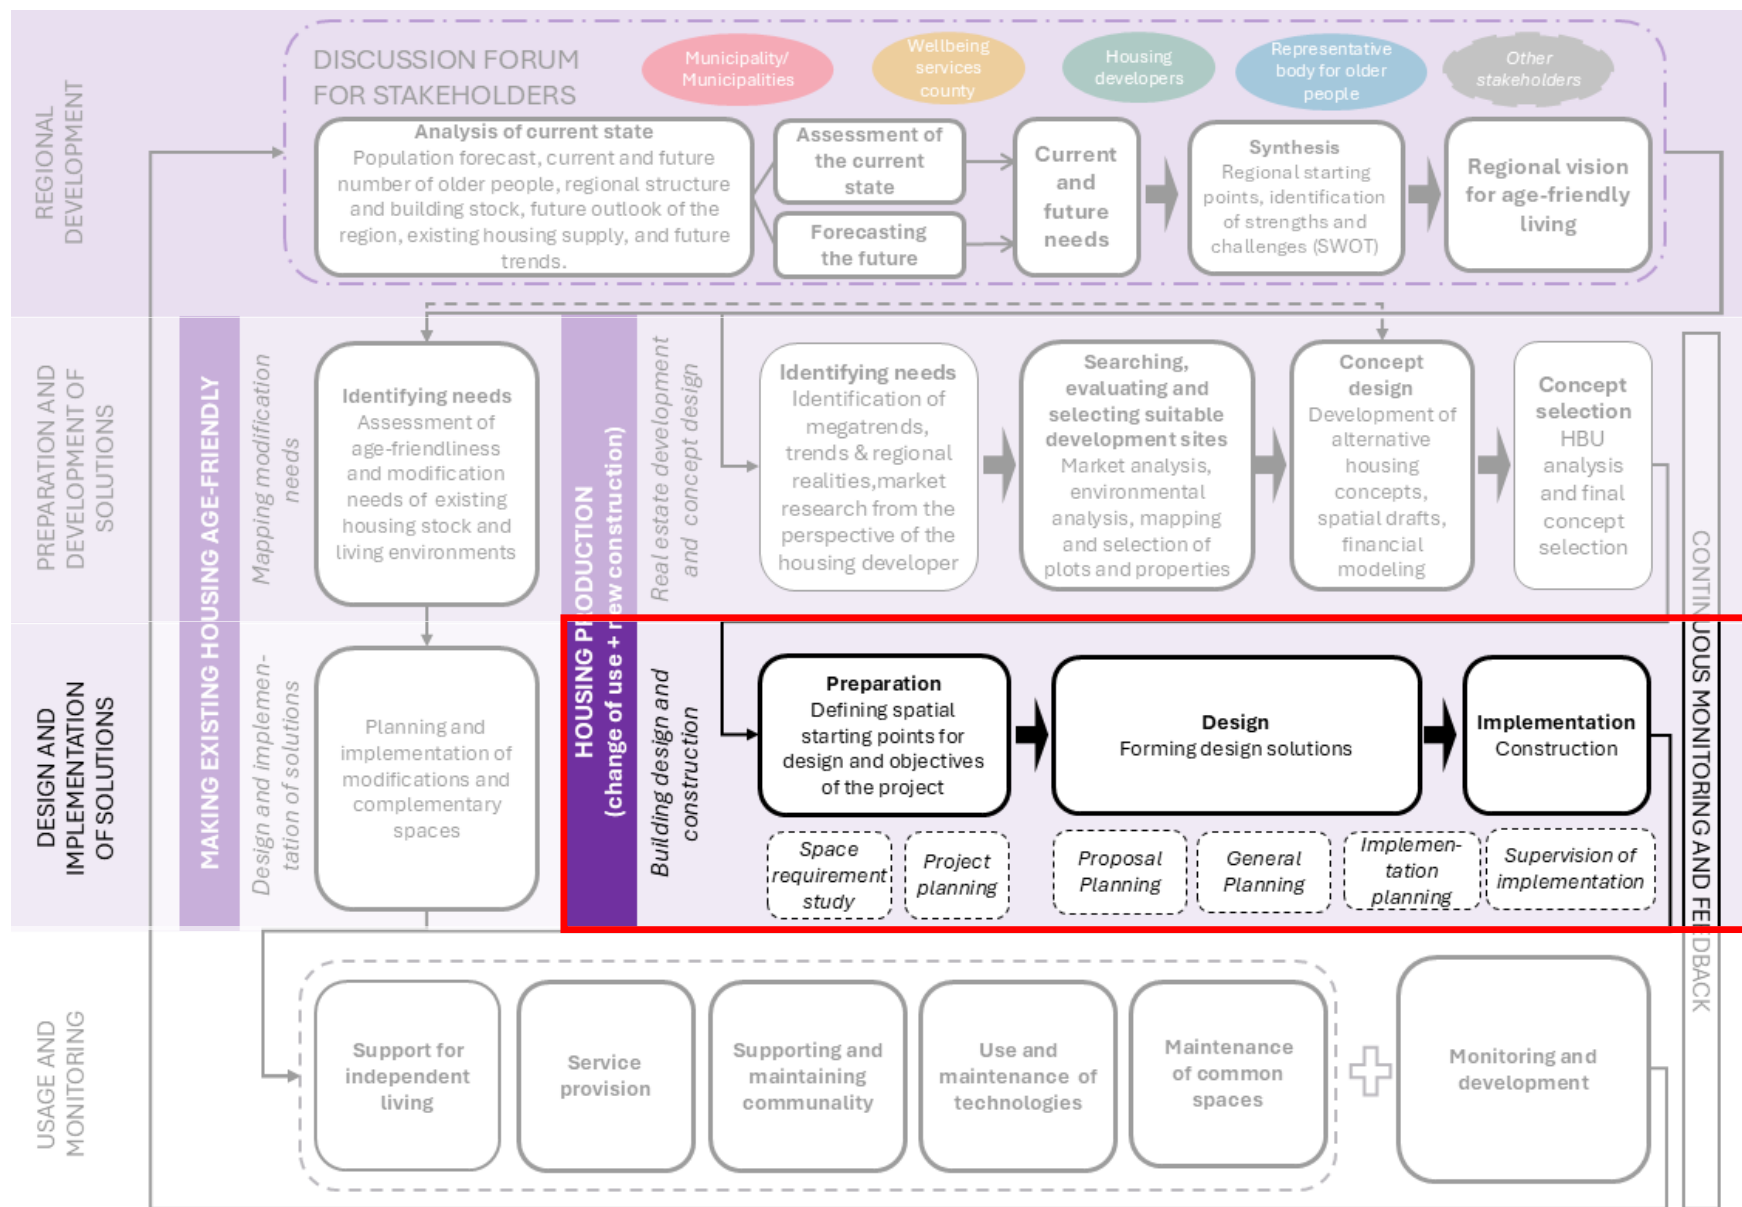

In the afternoon, familiar caregiver Sanni arrives with Eero, an elderly man in a wheelchair who lives in the care unit. Eero brings wooden crafts he made as therapy. “Here's a bird feeder,” he says to Hilja. “I thought it would look nice by your herb bed.” Hilja thanks him and promises to hang it up the next morning. Irja, an 85-year-old widow from a nearby village, also joins. She teaches crochet and shares childhood stories. The activity program is part of community life—residents plan and organize it themselves. Income from these events helps reduce the cost of shared spaces, which everyone appreciates. Hilja is delighted by how naturally people from different backgrounds and life situations connect.

In the evening, Hilja joins the shared sauna session. Afterward, she sits on a bench in the yard, watching the sun set behind the fields. Martta joins her, and they talk about next week's events. “I was thinking of suggesting a movie night,” Martta says. “Great idea,” Hilja replies. “We can use the community screen and make popcorn.”

When Hilja returns home, she turns on just one lamp. The lighting adjusts to evening mode, and the temperature feels just right. She sits for a moment in her armchair and writes a message on the community board: “Thank you everyone for today—especially Eero and Irja. Days like this make this place feel like home.”

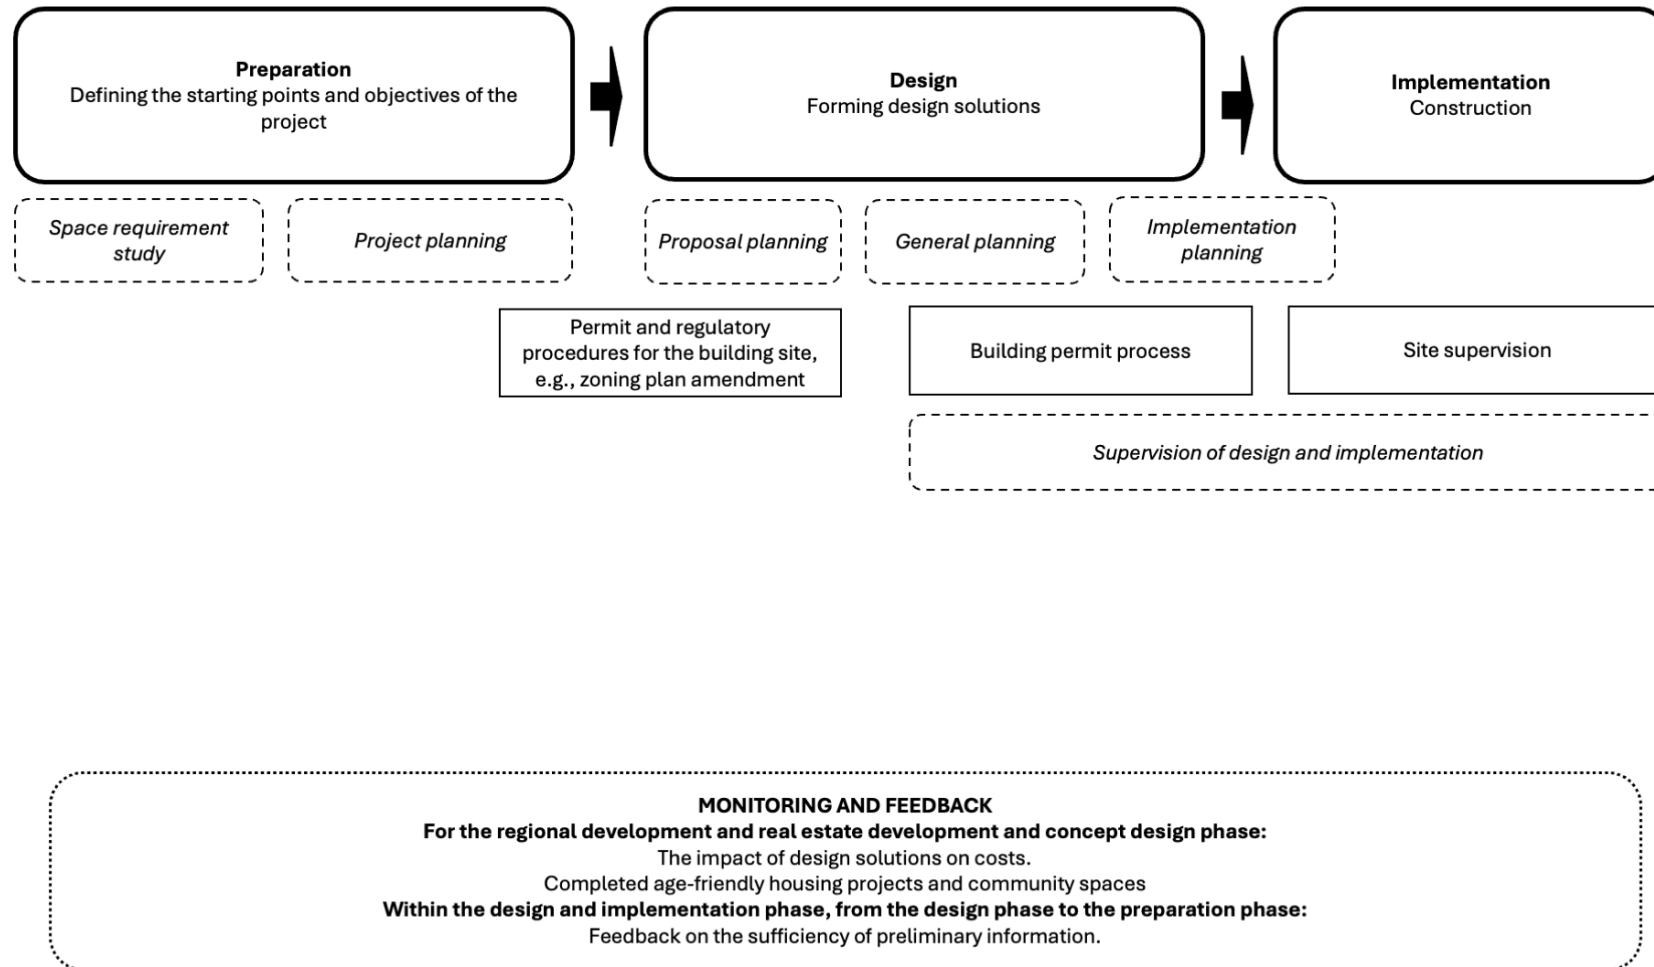

Then she turns off the lights. Outside, it's quiet.

Building design and construction

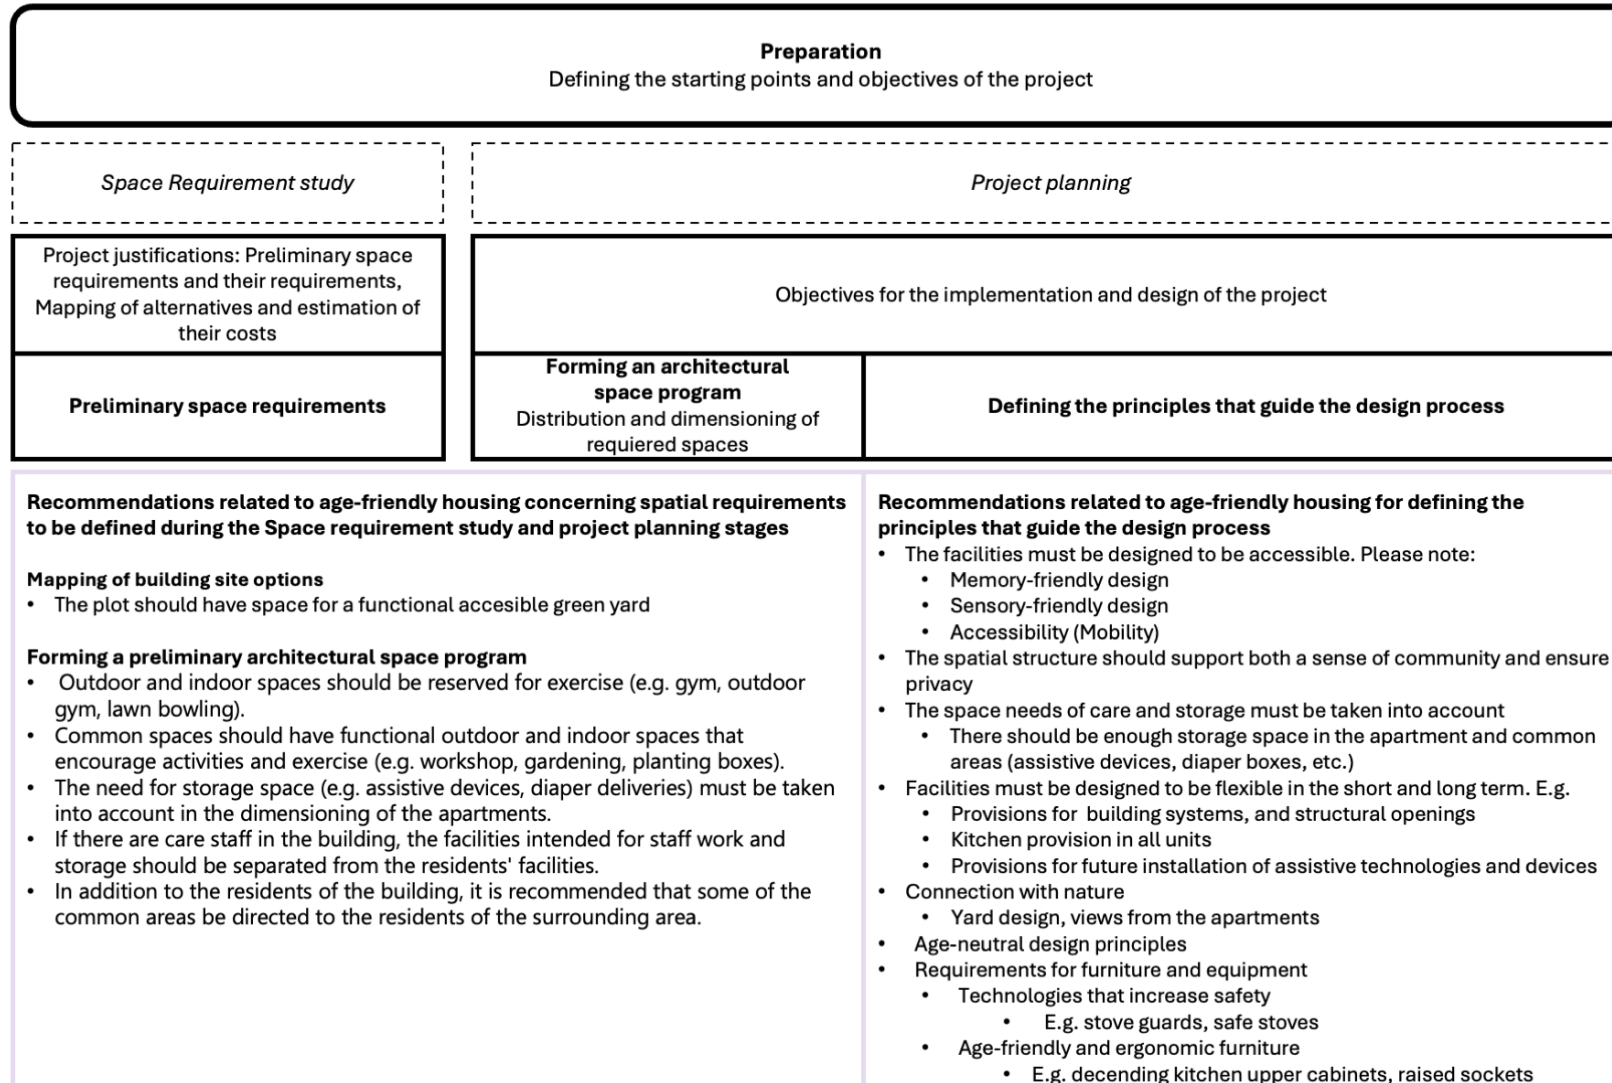

BUILDING DESIGN AND CONSTRUCTION PROCESS

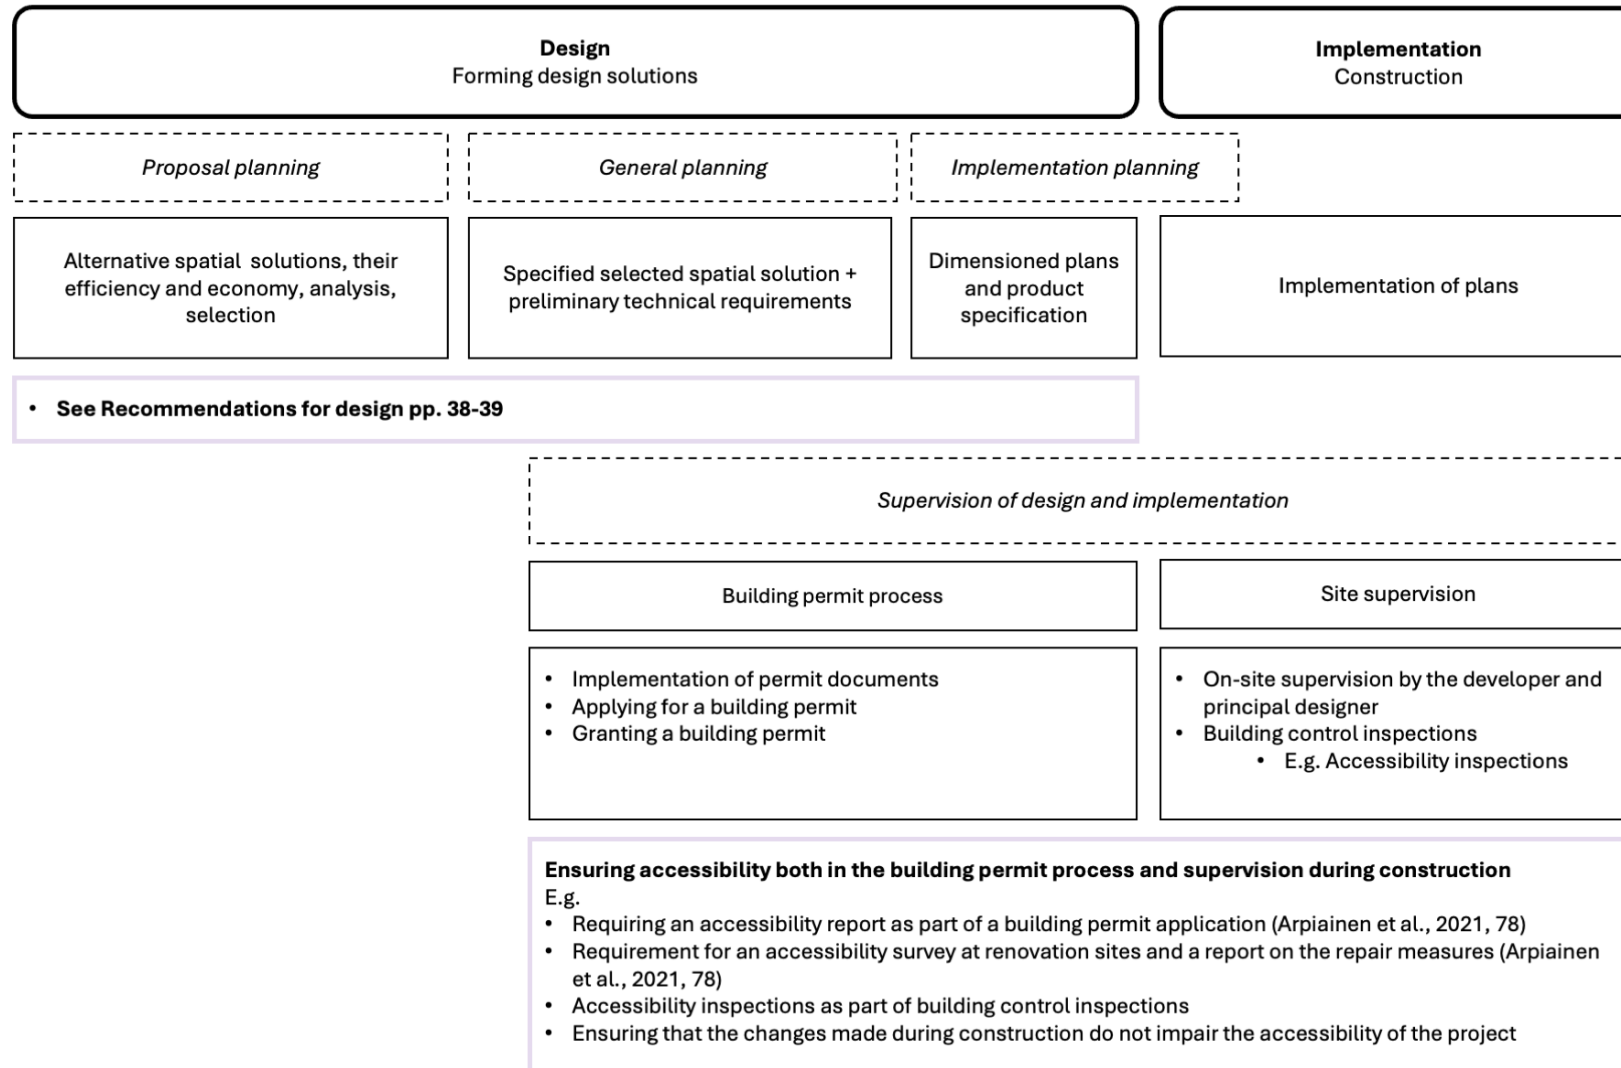

Sources for the structure and the roles of actors: RT 10-10827; RT 10-11222; RT 10-11224; RT 10-11284; (Kuusiniemi 2019)

Preparation & recommendations

Design & Implementation & Recommendations

RECOMMENDATIONS FOR DESIGN 1/2

1. Accessibility

- **Vision:**
 - Sufficient and even lighting should be ensured in all spaces, and dim spaces and sudden changes in the amount of light should be avoided.
 - Both artificial light and natural light should be used in lighting conditions.
 - Glare should be minimized by using curtains or sun visors and avoiding reflective wall or floor surfaces.
 - Contrast differences should be used in the interior to improve visibility (e.g. staircase steps, railings, toilet fixtures, glass walls, doors).
- **Hearing:**
 - Materials that reduce echoes and noise, such as acoustic panels, should be used in common areas.
 - The placement of the premises and sound insulation solutions must ensure that sounds do not carry from one space to another.
- **Movement and body control:**
 - Multi-storey housing should have an elevator or a stairlift.
 - All circulation spaces must have railings.
 - Passageways and doorways must be dimensioned spaciouly
 - Floor surfaces should be flat and non-slip, and thresholds should be avoided.
 - There should be resting places in the circulation spaces and in the yard.
 - There should be an accessible toilet in connection with common areas.
 - In the apartment, the toilet should be located in connection with the bedroom.
 - The doors should be easy to use, for example. assisted by electric opening.
- **Memory-friendliness**
 - Avoid long, maze-like corridors and repetitive spatial layouts.
 - Circulation routes should primarily consist of a sequence of functional spaces, allowing people using these spaces to serve as landmarks.
 - Visual connections between spaces should be enabled.
 - Colors and cues should be used to support navigation (e.g., each residential floor has its own color code).
 - Apartment entrances should allow personalization (for example, with a picture or a piece of furniture).
 - The building should provide access to an accessible outdoor courtyard.
 - Apartments designed for people with memory disorders should preferably be located so that residents have direct, unaccompanied access from the residential floor to a safe outdoor area without needing an escort (via elevator or stairs)

2. Connections to the outside

- Apartments and shared spaces should offer views of green space (e.g., towards a courtyard).
- Yard design should consider ease of winter maintenance (Verma et al., 2022).
- Placement of functions on the plot should take into account how building massing and positioning affect light conditions for both the plot and the building.
- Views from apartments should, where possible, be oriented towards nature

Engage current and future users as well as family members.

In all decisions and solutions, resource wisdom should be prioritized by developing what already exists. When building new structures, prepare for changes with flexible solutions.

Selected solutions must also be suitable for other age and user groups.

Ensure diversity and abundance of housing options in all decisions and solutions.

Consider community and its support at different levels.

Always adapt decisions and solutions to the local context.

RECOMMENDATIONS FOR DESIGN 2/2

3. Communality (Haukeland 2024)

- **Design that supports social interaction**

- Common areas should be designed to be functional (e.g. shared kitchen, conservatory, garden, gym, laundry room).
- Shared spaces should be centrally located in the spatial structure in relation to the apartments and in connection with everyday routes.
- The apartments should have views of the common areas (e.g. from the kitchen to the courtyard).
- The routes should be compiled mainly from functional space series, and windowless narrow corridors should be avoided.

- **Design that supports privacy**

- Sounds should not carry between apartments and shared spaces.
- Apartment entrances should not be located directly adjacent to shared spaces; instead, there should be a transitional zone (e.g., a resident-controlled area or stairwell) between apartments and shared spaces to protect privacy.
- Shared spaces should not have unobstructed visual access to apartments.

- **An environment that supports inclusion:**

- In the design of common areas, it must be taken into account that residents have the opportunity to meet with different sizes of ensembles.
- The residents' handprint should also be visible in the common areas (for example, a personalised apartment entrance).

4. Functionality and comfort

- The need for storage space (e.g. assistive devices, diaper deliveries) must be taken into account in the dimensioning of the apartments.
- The premises of the apartment must enable care and assistance in everyday activities (e.g. washing, etc.).
- Attention should be paid to the appearance of assistive devices that support movement and activity, and they should not stand out too much from the rest of the interior.
- When choosing furniture, attention should be paid to aesthetics and office-like furniture should be avoided.
- The property must have a designated parking space for care staff.

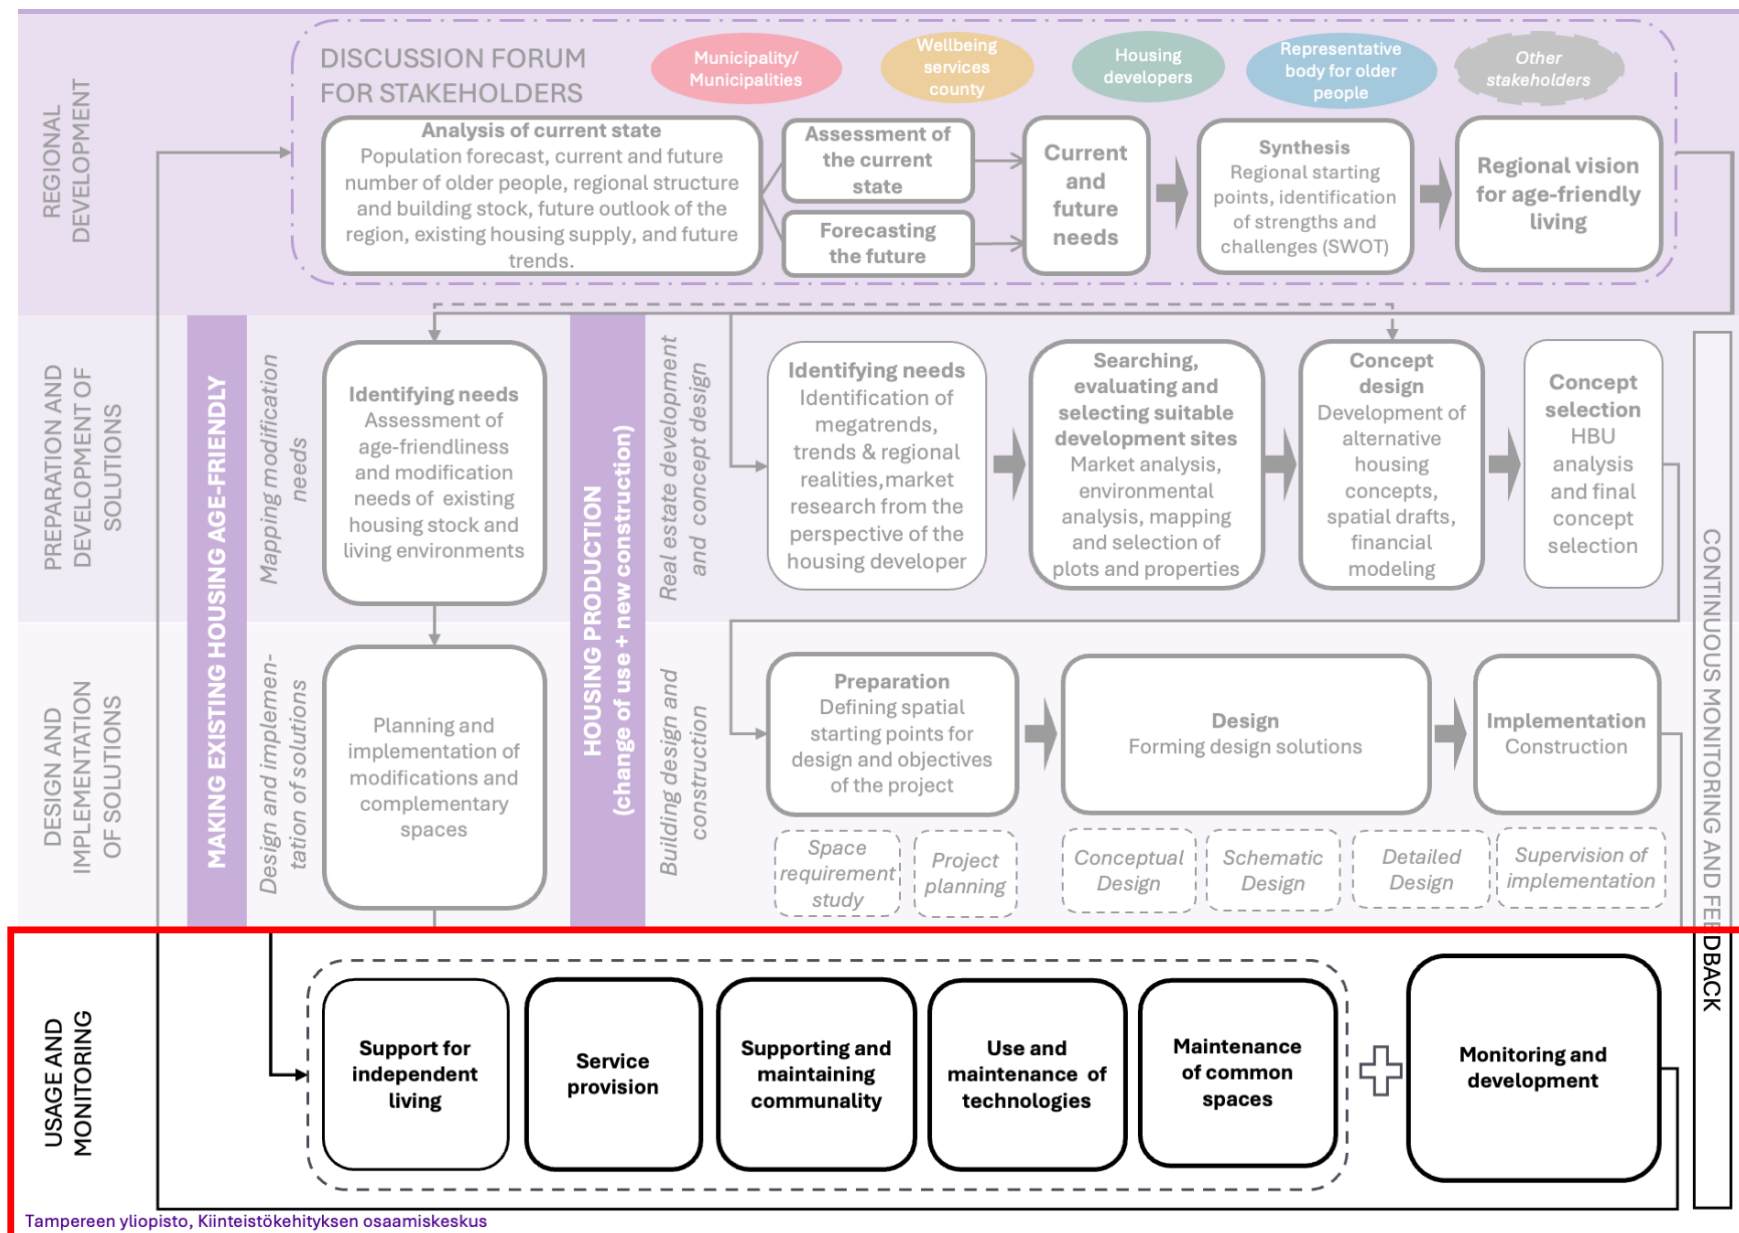

5. Adaptability

- The design should take into account how structural systems, building services, and layout affect the building's adaptability in the future (see Tarpio 2015)
 - Adaptability is made possible, for example, by long spans and pillar structures (Häkkinen and Ala-Kotila 2019).
- The window division must enable the division of spaces into smaller spaces with windows (Pelsmakers et al. 2022; Yrjänä 2024).
- The number and placement of the building's stairwells must enable versatile and flexible apartments (Yrjänä 2024)

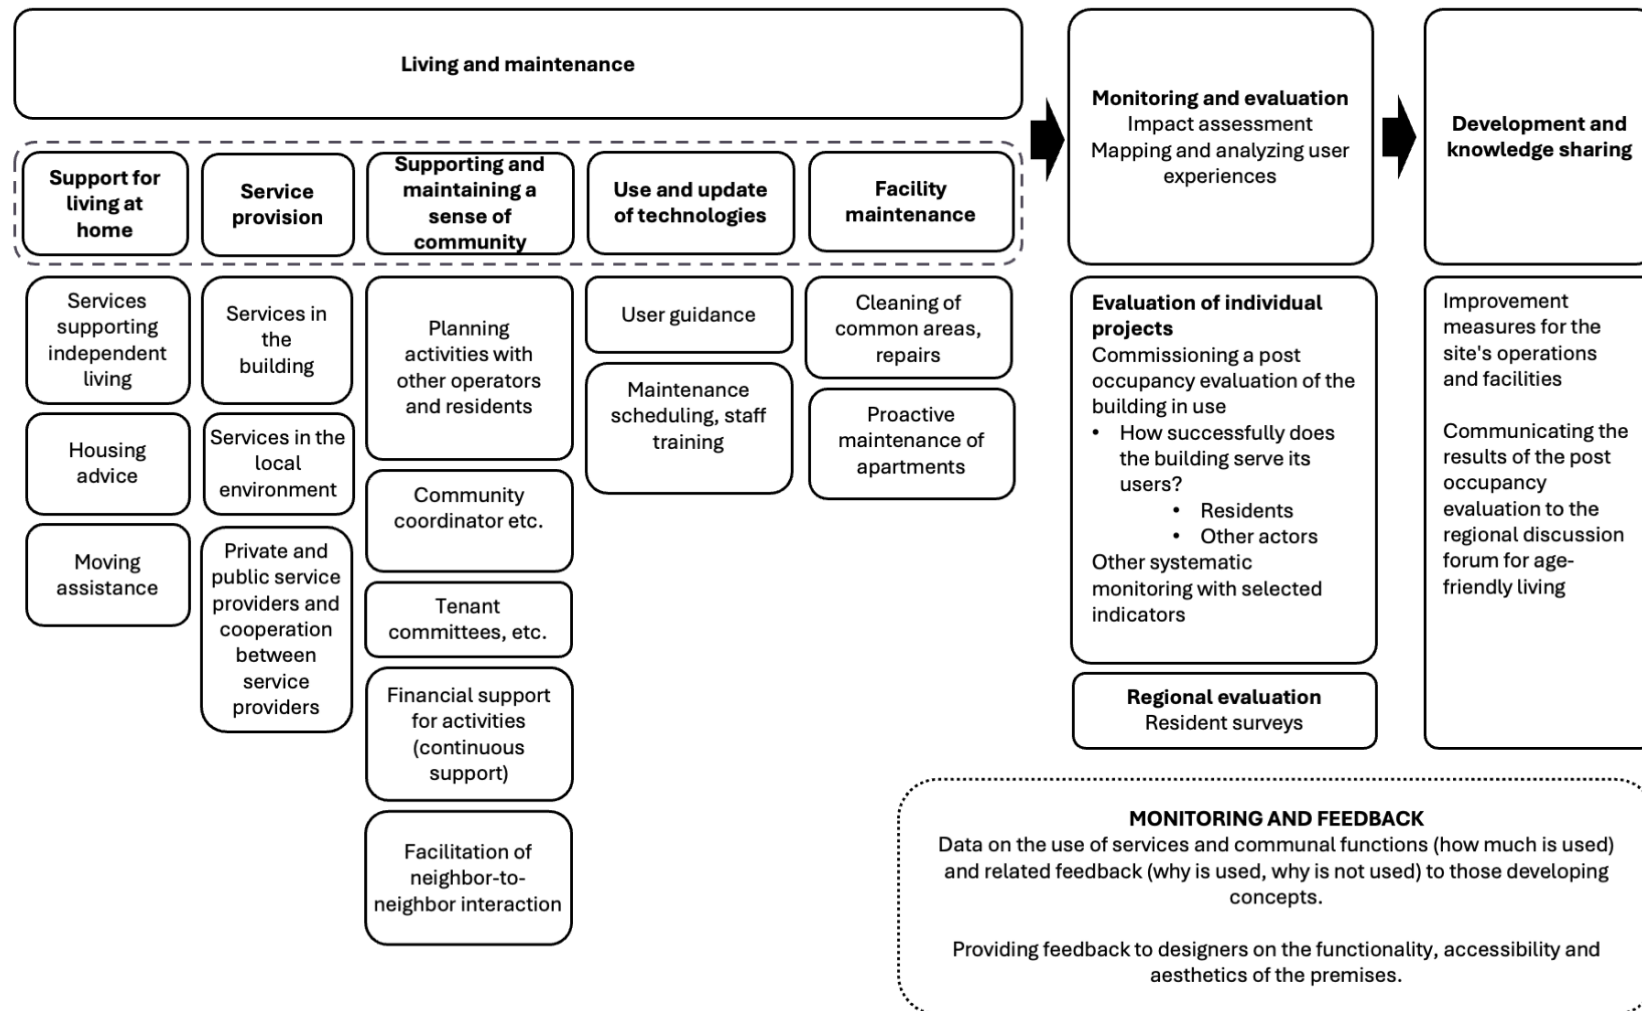

6. Universal principles of good housing design (Pelsmakers et al. 2022)

- The frame depth of the building should not exceed 12 metres
- Most apartments should open in at least two directions
- The central corridors dividing the building's frame in two should be avoided and natural light should be allowed to enter the stairwell
- All apartments should have a direct connection to the outside (terrace or balcony)
- It must be possible to furnish the apartments in several ways

Usage and monitoring

USAGE AND MONITORING PROCESS

RECOMMENDATIONS FOR THE USAGE AND MONITORING PHASE

Participation

- Engage older people in the development of services and community activities
- Collect and respond to feedback from older people
- Support and enable activities organized by older people themselves

Adequate guidance

- Older people must be familiarized with the technologies utilized in housing and their proper use.
 - For example, stove guard and similar devices.
- Older people must be instructed on how to use the new apartment and the building

Supporting communality

- Activities organised by the elderly themselves should be supported and enabled.
- Cooperation with different actors and service providers should be utilised in the production of communal events and activities.
- Intergenerational communality and a sense of community within the area should also be promoted through events or activities open to non-residents.

Collecting feedback and further development

- Satisfaction with the quality of housing must be assessed, and opportunities for providing feedback must be ensured
 - For older people
 - For other stakeholders
- Identified challenges must be addressed, and efforts should be made to find appropriate solutions.
- Post-occupancy evaluation (POE) should be conducted for completed housing projects a few years after completion. The results should be reported to developers of age-friendly housing and shared in the regional discussion forum for age-friendly living

Supporting living at home

- Considering and anticipating personal housing needs
 - Housing advice
- Supporting moving into an age-friendly apartment
 - Moving assistance
- Services supporting independent living and their needs assessment

Engage current and future users as well as family members.

In all decisions and solutions, resource wisdom should be prioritized by developing what already exists. When building new structures, prepare for changes with flexible solutions.

Selected solutions must also be suitable for other age and user groups.

Ensure diversity and abundance of housing options in all decisions and solutions.

Consider community and its support at different levels.

Always adapt decisions and solutions to the local context.

Recommendations

Selected recommendations (1/2)

- Age-friendly modifications and changes of use should come first before new construction
 - Age-friendliness as a principle in all modifications and construction
- Versatility and flexibility, diverse housing options
 - Also services should adapt to residents' needs, not the other way around!
 - Considering the needs of future older adults
 - Place-based solutions
- Supporting communality and active participation
 - Engaging current and future older adults in all stages of housing development
 - Communities should be nurtured and maintained
 - Developing methods of participation

Selected recommendations (2/2)

- Recommendations related to regulation and funding:
 - Encouraging and enabling experimentation
 - National guidelines how to interpret fire regulations
 - Testing of new financing models (eg. S106 / uk)
 - Age-friendly housing development and renovations should be financially supported
- Small municipalities: different realities compared to cities, but housing must be enabled (ageing in place)
 - Other services and solutions must also be taken into account
- Collaboration across all domains
- Actors' training, exploration of new solutions
- Strategic approach, long-term planning
 - Sharing information → utilization
 - Preparing for the future
