

Approximate Computing for Communications

Basic information:

Applications are invited for 15 full-time PhD student positions (called Early Stage Researchers or ESR) for PhD degrees for 36 months. The positions are offered within the Approximate Computing for Power and Energy Optimisation (APROPOS) International Training Network action of the highly appreciated EU-funded Marie Skłodowska Curie grants. The positions are fully funded for a 36-month period. You can choose your position in one of 14 top-level universities and companies in Europe and complement your experience within periods from 3 to 9 months of cross-sector secondments by working with the highly committed industrial partners of the action. You are encouraged to apply for up to three positions within APROPOS network if you believe your profile is suitable for multiple topics. A separate application is needed for each position in case you apply for multiple positions.

APROPOS is an international, multidisciplinary and multi-sectorial training network programme on approximate computing. APROPOS is funded by the European Union's Horizon 2020 research and innovation programme under the Marie Skłodowska Curie grant agreement No. 956090.

The ESR-specific project is described below. Please read the description carefully before applying. We recommend you choose the position you apply for based on your technical profile and desired technical expertise, rather than based on the hosting location, as all positions involve high-level research mobility.

Project information:

APROPOS will train 15 Early Stage Researchers to tackle the challenges of future embedded and high-performance computing by using disruptive methodologies. Following the current trend, by 2040 computers will need more electricity than the world energy resources can generate. On the communications side, energy consumption in mobile broadband networks is comparable to datacentres. To make things worse, Internet-of-Things will soon connect 20 to 50 billion devices through wireless networks to the cloud.

APROPOS aims at decreasing energy consumption in both distributed computing and communications for cloud-based cyber-physical systems. We propose adaptive Approximate Computing to optimize energy-accuracy trade-offs. Luckily, in many parts of the global data acquisition, transfer, computation, and storage systems there exists the possibility to trade off accuracy to either less power or less time consumed – or both. As examples, numerous sensors are measuring noisy or inexact inputs; the algorithms processing the acquired signals can be stochastic; the applications using the data may be satisfied with an “acceptable” accuracy instead of exact and absolutely correct results; the system may be resilient against occasional errors; and a coarse classification or finding the most probable matches may be enough for a data mining system. By introducing a new dimension, accuracy, to the design optimization, the energy efficiency can even be improved by a factor of 10x-50x.

APROPOS will train the spearheads of the future generation to cope with the technologies, methodologies, and tools for successfully applying Approximate Computing to power and energy saving. The training, in this first ever ITN addressing approximate computing, is to a large extent done by researching energy-accuracy trade-offs on circuit, architecture,

software, and system-level solutions, bringing together world leading experts from European organizations. In addition, we will provide network-wide and local trainings on the substance and on the complementary skills needed in both industrial and academic work life.

ESR Host Unit: WIREPAS, Finland (main host in industry but physically close to the university)

ESR 14 Objectives:

- Demonstrate the energy-accuracy trade-offs in approximate MAC layer
- Apply approximate computing to low-energy adjustable radio protocol design
- Support the benchmarking activities of T2.2

ESR Expected Results:

Proof-of-concept implementation of adjustable receiver protocols. Methods for designing low-cost approximating receiver protocols.

Planned secondment(s): TAU, supervisor Prof. Jari Nurmi, M24, 4 months and M40, 5 months for coursework, academic training, thesis writing, and aligning with the research outcome of TAU research on approximating hardware.

Supervisory team:

- Dr. Ville Kaseva (WIREPAS), main industrial supervisor
- Prof. Jari Nurmi (TAU), main academic supervisor
- Prof. Elena-Simona Lohan (TAU), academic co- supervisor
- Dr. Aleksandr Ometov (TAU), academic co- supervisor

Enrolment in Doctoral degree: Tampere University, Finland

Target degree: PhD/D.Sc.(Tech.) in Doctoral Programme of Computing and Electrical Engineering (DPCEE)

Degree details: <https://www.tuni.fi/en/study-with-us/doctoral-programme-computing-and-electrical-engineering#switcher-trigger--overview>

Expected start date: July 2021 (M9 from the beginning of the project)

Approximate gross salary: about 3600 EUR/month for researchers without family (and about 4000 EUR/month for researchers with family); Note: for different positions within the same APROPOS network, the salary is country- and unit-dependent.

Duration: 36 months

Researcher Profile: First Stage Researcher (R1)

Research Field: Engineering; Computer science; Technology

Type of contract: Temporary

Job Status: Full-time

Hours per week: 40

Trial period: 6 months

Working and living conditions in the country: Finland is among the most stable, free, and safest countries in the world, based on prominent ratings by various agencies. It is also ranked as one of the top countries as far as social progress is concerned. Tampere is counted among the major academic hubs in the Nordic countries and offers a dynamic living environment. Tampere region is one of the most rapidly growing urban areas in Finland and home to a vibrant knowledge-intensive entrepreneurial community. The city is an industrial powerhouse that enjoys a rich cultural scene and a reputation as a center of Finland's information society.

Unit details: Wirepas is a company, developing and licencing Wirepas Mesh radio communication software for large scale Industrial Internet of Things applications. Our wireless technology can support large scale IIoT installations, with lowest total connectivity cost compared any other technologies. Wirepas Mesh is application agnostic enabling our customers to develop large variety of different IIoT applications. Our customers design products and use our software development kit (SDK) for their application development fitting their business needs. For gateways and cloud connection we offer open source reference software, which our customers can modify.

In addition to the core mesh technology, we license software products for cloud environments. Wirepas Position Engine (WPE) provides position calculation for asset tracking and Wirepas Network Tool (WNT) is device configuration and network status monitoring.

Wirepas is established in 2010 as a spin-off from Tampere University of technology after 10 years of research of distributed and de-centralized sensor networks. Our personnel is 50 and annual turnover 2.3 M€ at 2018. Our Headquarter is in Tampere, and we have R&D in Finland, France and USA, and sales offices in Finland, France, Germany, USA, Korea, Australia and India.

Seconding Unit description: Tampere University is the second largest university in Finland, established in the beginning of 2019 through the merger of Tampere University of Technology and the University of Tampere. This combination built a unique environment for multidisciplinary, inspirational and high-impact research and education and a hub of expertise in technology, health and society.

Tampere University is the majority shareholder of Tampere University of Applied Sciences and together the two institutions form a higher education community of 30,000 students, 330 professors and 4,400 other staff.

Eligibility criteria: please check carefully that you are eligible; all conditions below are compulsory

Transnational mobility: The researcher must not have resided or carried out their main activity (work, studies, etc.) in the country of the host organization for more than 12 months in the 3 years immediately prior to the start date. Note: the mobility rule applies to the (main) beneficiary where the researcher is recruited, and not to partners to which the researcher is sent or seconded. It is also only determined at one point in time: at the time when the ESR starts working for APROPOS.

Early-Stage Researchers (ESRs)/fresh MSc graduates: All researchers recruited in APROPOS must have less than 4 years since the completion of their first MSc degree and have not been awarded any doctoral degree at the date of the employment.

Background requirements: The applicant must be in possession of Master of Science (MSc) diploma in a relevant field, such as: electrical engineering, communications engineering, computer engineering, software engineering/computer science, signal processing, radio communications, mathematics, physics, aerospace engineering, mechanical engineering, biomedical engineering, etc.

English language requirements: The candidate must be in possession of an English certificate with good level according to the regulations of the university to which the student will be enrolled for the PhD degree – check the degree requirements of the corresponding doctoral program for details.
