Initiative 5: Tampere University researchers collaborating at the grassroots

Description

Tampere University considers sustainability as one of their top priorities and has recently opened its centre for Sustainable Transformation of Urban Environments (STUE). STUE aims to take part in *real* action, and not just research. The researchers at STUE want to collaborate with the public sector, civil society, communities and businesses. We need to ensure that everyone understands each other, shares knowledge and learns together. But how can this happen and what should STUE do?

Challenge

To develop a way for researchers and sustainability organisations to interact and collaborate in a meaningful way.

We need...

People who are interested in connecting research to sustainability in civil society. People from grassroots or activists groups who can see potential benefits of collaborations with researchers in Tampere.
