

Initiative 4:

Korento Nature School and innovations in nature education (1/2)

Description

Korento Nature School has been operating for 20 years. Their main activity is hosting school children in their visitor center in Terälahti. Korento wants to be involved in the development of nature education and the pedagogy of outdoor learning, so that everyone, regardless of age and background, can become part of planetary thinking. Biomimicry is one way to connect nature with continuous learning. Nature has already come up with solutions, we just have to find them. Korento Nature School wants to develop new ideas of how to work with visiting children and youth both within and outside normal school times (when the school is normally empty). It would be interesting to investigate how the school can become a centre open to various groups and people.

Initiative 4:

Korento Nature School and innovations in nature education (2/2)

Challenge

To develop ideas and find funding to help Korento to play an even more important role in sustainable transition and biomimicary movement.

We need...

People with experience with nature and teaching. People who are interested in developing ideas around green care, biomimicary and the city of Tampere.
