Knitted textile solution for all steps
of life since 1978
Children clothing
Sport
Work
Hospital
Military
Personal protection
Casual wearing

orneule

Tracebility and digital passport

- Textile and clothing industry traditionally have been able to track raw materials back to original production lots

- We can identifyall rolls of production lots

- Every grey fabric roll has its own serial number and yarn can traced back . We keep track rolls in dying lots.

- Every dying dying lot have record

- All yarn lots are kept separate and usage is recorded

orneule

Certicates for yarn

- All Orneule yarns have Oekotex certificate

- Bulk yarn don't have much information

- Certificated yarn have information of origin and checked production conditions back to whole production prosess

- Cotton has several certificates . Orneule uses mostly GOTS sertificated cotton

- Recycled yarns have own certification systems

  like recycled polyester has GRS

- Different certificates makes life complicated

orneule

Digital product passport

- We need to combine current data to information available to custumer chain and final user

- It can be done but causes work and costs

- Will data go to garment maker or common database ?

- How long information be available

- Level information   every garment or
                          production lot
